

Semester GTM, Financial, Sales and Compliance Playbook

Go-to-market, financial model, institutional outreach, and cloud security and compliance plan

Internal. Draft. Not for customers or investors.

Operating document. It is not legal, tax, accounting, insurance, privacy, security or accessibility advice. Every figure is a planning assumption or forecast, not an approved price, budget or target.

ASSUMPTION VERIFIED DRAFT INTERNAL APPROVED REVIEW

Every statement is labelled. No item in this document is a customer-facing approved claim: no named approver is recorded for any wording.

How to read the labels

Labels apply to a section, a table row or a bullet, not to every sentence. The count is how many label tags appear in this document; legend mentions in code formatting are not counted.

Label	Meaning	Count
VERIFIED	Verified implementation or evidence. Backed by a path in the repository or an evidence id.	43
ASSUMPTION	Planning assumption. A number, rate, timing or price chosen to plan with. Not evidenced.	36
DRAFT	Draft requiring review. Default for anything new.	38
APPROVED	Customer-facing approved claim. Needs a named approver and a register row. None exists today.	0
INTERNAL	Internal-only material. Never to be sent to a customer or prospect as written.	2
REVIEW	Professional review required: counsel, tax, accounting, insurance, privacy, security, accessibility or procurement.	179

Planning assumptions are labelled ASSUMPTION. **Verified claims** are labelled VERIFIED and name their evidence. **Draft and internal items** are labelled DRAFT and INTERNAL. **Customer-facing approved material** is labelled APPROVED and is absent: the count above is zero. **Professional-review items** carry a REVIEW flag naming the profession.

Contents

- 1. Executive summary
- 2. Semester launch wedge
- 3. ICP and buyer map
- 4. Pricing and packaging assumptions
- 5. Customer acquisition funnel
- 6. Sales process
- 7. Pilot proposal framework
- 8. Institutional pilot agreement outline
- 9. Sales email sequence summary
- 10. Financial model methodology
- 11. Scenario summary
- 12. CAC, LTV, payback, runway and break-even definitions
- 13. Customer success and onboarding lifecycle
- 14. Cloud security and compliance plan
- 15. Trust Center and HECVAT roadmap
- 16. 90-day plan
- 17. KPI tree
- 18. Operating cadence
- 19. Risk register
- 20. Required human and professional reviews
- 21. Appendix: master GTM prompt

1. Executive summary

Semester GTM, finance, sales and compliance: executive summary

Control	Value
Status	DRAFT, INTERNAL. PLANNING ASSUMPTIONS. NOT APPROVED BY ANY NAMED OWNER.
Owner	Harrison Rubin (interim; counsel, accountant, broker and security assessor unassigned)
Evidence date	2026-10-05 at repository revision 5eba494 plus this branch
Labels used	VERIFIED ASSUMPTION DRAFT INTERNAL REVIEW: ... APPROVED count: 0

Operating summary. Not legal, tax, accounting, insurance, privacy, security or accessibility advice.

What this is DRAFT

A go-to-market and operating system for Semester built on what the repository already holds, extended only where something was missing. It has five parts: a master GTM playbook, an in-app financial model, a 15-sequence institutional outreach system, a cloud security and compliance plan, and this report. The existing-versus-missing inventory is in docs/business/INVENTORY.md.

The commercial thesis ASSUMPTION

Two engines. **Institutional revenue:** sell one narrow, measurable workflow, the Registration Readiness Pilot, to a named sponsor for a defined cohort, then convert it to an annual agreement and expand. **Student adoption:** create immediate utility and measure activation, first meaningful action, workflow completion, weekly use and satisfaction, so that measured outcomes become the proof for renewal. Semester is not sold as a replacement for every university system.

What may be done today VERIFIED (GO-NO-GO-DECISION.md , 2026-10-03)

Motion	Decision	Allowed now
Individual students	Conditional GO	Invitation-only, unpaid validation
Design-partner institutional pilot	GO for non-activation work only	Discovery, synthetic demos, evidence exchange, conditional scoping
Paid institutional pilot	NO-GO / RED	Preparation only: no payment, no live data, no launch obligation

Motion	Decision	Allowed now
Broad enterprise sale	NO-GO / RED	Learning only

Every artifact in this system carries a Gate statement saying what is allowed now and what is held. Nothing here authorises a price, a payment, live data or a customer claim.

What was built VERIFIED

Part	Where	What it is
Finance model	app/src/finance/ , Console Finance model tab	A 36-month engine, 12 scenarios, about 100 validated inputs, two sensitivity matrices, five warnings, five exports; 97 tests; every output labelled a forecast
GTM documents	docs/business/gtm/	Master playbook (sections A to J), customer-safe version, 90-day plan, KPI tree
Sales system	docs/business/sales /	15 outreach sequences (29 email blocks, each with persona, trigger, action, A/B, CRM record, timing, stop condition, compliance note), discovery script, proposal, action plan, 36 objections, CRM pipeline with a 100-account template
Customer success	docs/business/customer-success/ , templates/	Onboarding workflow, pilot success plan, health score, renewal playbook, eight fill-in templates
Compliance	docs/business/compliance/	Ten consolidated views over docs/trust/ , including a 99-row evidence register with the brief's columns

What the model says ASSUMPTION (Forecast)

At the default assumptions (lean founder-led team, 20 accounts contacted a month, paid pilots from month 7) the Base case reaches about **\$110k ARR in month 36**, never breaks even inside 36 months, and needs about **\$724k of funding** to keep cash at zero. Only the Ambitious scenario breaks even (month 35). The finding is volume: at about three pilots a year the plan does not carry even a lean team. LTV : CAC is about 1.4x on unvalidated retention. Every rate is a placeholder until the first design-partner engagement measures it.

Decisions that need the founder INTERNAL

1. **Pilot length.** Code enforces 26 weeks (D-134); the brief assumes 8 to 12 weeks.
2. **Student price.** D-134 \$7.99 / \$59; D-1154 \$15 per month; the brief \$8.99 / \$69. None is approved.
3. **Institutional price and unit.** Per enrolled student (\$18) versus per active student; the \$30,000 minimum sits between the deal-desk department and campus minimums.
4. **AI pool.** 2,400 requests per student per year may cost more than the platform fee; "request" needs a definition.
5. **Whether and when to price a pilot at all**, given the paid-pilot NO-GO.

Top 10 next actions, in order DRAFT

1. Decide conflicts 1 to 5 and record them as a decision.
2. Engage higher-ed SaaS counsel for pilot paper, DPA and public wording; fix the public 72-hour breach-notice wording first. REVIEW: counsel
3. Engage an accountant and tax adviser and a broker; replace the model's placeholders (opening cash, insurance, accounting, obligations) with quotes. REVIEW: accounting REVIEW: tax REVIEW: insurance
4. Get quotes for the independent security assessment and the accessibility review (go/no-go blockers 2 and 3). REVIEW: security REVIEW: accessibility
5. Correct existing wording that exceeds the claims register: HECVAT draft rows, privacy page, RFP library entries.
6. Build the 100-account list with a recorded reason for outreach on each account, and send sequences 1 to 7 only.
7. Hold 10 discovery calls; record them in the CRM; qualify one design partner.
8. Run a synthetic-data demo and a pilot design session; capture baselines.
9. Name a backup owner and run the first restore and rollback exercise (blockers 6 and 7).
10. Re-run the model monthly with real numbers; start the weekly revenue review.

Evidence state

Repository evidence. The model, tests and documents exist and link to their sources. **Operational evidence.** None: no customer, pilot, outcome, price, certification, assessment, contract or measured financial figure exists. **Missing proof.** See the compliance evidence

register and the P0 blockers in the 90-day plan.

Claim ceiling

Internal planning and discussion with professionals and advisers.

Prohibited claims

No customer, outcome, price, forecast, certification, compliance, integration or availability claim, to anyone, on the strength of this document.

Professional review required

REVIEW: counsel pricing, pilot paper, public wording. **REVIEW: accounting** **REVIEW: tax** model treatment. **REVIEW: insurance** coverage.
REVIEW: security **REVIEW: privacy** **REVIEW: accessibility** control and conformance statements. **REVIEW: procurement** how limits are presented.

2. Semester launch wedge

A.0 WHAT THE GO/NO-GO ALLOWS TODAY VERIFIED GO-NO-GO-DECISION.md (2026-10-03)

WHAT THE GO/NO-GO ALLOWS TODAY

Motion	Decision	May do now	Must not do
Individual student acquisition	CONDITIONAL GO / YELLOW	Prepare invitation-only, unpaid validation; activate a bounded cohort only after every applicable gate is evidenced	Broad or paid promotion, unsupported outcome claims, treating repository flows as a staffed service
Design-partner institutional pilot	GO / GREEN for non-activation engagement only	Discovery, synthetic demos, evidence exchange, fit/limitation review, conditional scoping	Live customer data, tenant activation, customer/logo claims, production integrations, a launch promise
Paid institutional pilot	NO-GO / RED	Remediation and procurement preparation	Accepting payment , an unconditional launch obligation, activating live data
Broad institutional enterprise sale	NO-GO / RED	Long-range qualification and learning, limitations disclosed	GA / enterprise / system-replacement positioning, scale or assurance claims, broad contracting

Held until a named gate flips: price quote, order form, invoice, payment, live data, activation, annual conversion, case study, reference, logo. Ten blocking items (independent security assessment, accessibility review, counsel-approved paper, entity/tax/insurance authority, staffed support, restore/rollback exercises, named customer scope, baselines, repeatability, immutable candidate) are listed in GO-NO-GO-DECISION.md; the nine that block a paid pilot are carried into the 90-day plan as the P0 list. Conditions are gates, not a schedule promise; a conflict resolves to the more conservative boundary.

A.2 Initial launch wedge: "Semester Registration Readiness Pilot" DRAFT

Working name in the repository is "Semester Student Success and Registration Readiness Pilot" (PILOT-OFFER.md); this playbook shortens it to the founder's name, "Semester Registration Readiness Pilot". The offer remains a **conditional design-partner concept** until the paid-pilot gate flips.

Element	Content	Label
Buyers	Student Success, Advising, Registrar, Student Affairs, academic department leadership, a program or cohort owner	DRAFT
Core problem (institution)	Staff work across fragmented systems, manual reminders and spreadsheets, with little visibility into where students are blocked	DRAFT hypothesis, not yet confirmed in a named discovery call
Core problem (student)	Students lack clarity about requirements, deadlines, planning, registration actions, support options and next steps	DRAFT hypothesis; consistent with CLM-001 product description
Scope	One cohort, one workflow, manual or approved read-only inputs, limited integrations, named executive sponsor and operational champion, written success criteria, written annual conversion decision date	VERIFIED pilotReadiness in pilot.ts; PILOT-OFFER.md
Cohort	50-200 target; hard bounds 10-200	VERIFIED docs/PAID-PILOT-FRAMEWORK.md; ASSUMPTION 50-200 as target
Duration	OPEN DECISION. Code enforces PILOT_WEEKS = 26 (D-134); the founder's planning assumption is one term or 8-12 weeks. See A.7 and open decisions	VERIFIED 26 in pilot.ts; ASSUMPTION 8-12 weeks
Primary pilot metrics	activation; first meaningful action; workflow completion; weekly active use; staff time / support-friction reduction; student confidence / satisfaction; support issue reduction; pilot-to-annual conversion readiness	DRAFT ; definitions in the KPI tree. Staff-time and satisfaction are self-reported and non-causal
Not in scope	System-of-record replacement; official registration decisions; individual risk scoring; SIS/LMS write; health, disability, conduct, aid, counseling, immigration data	VERIFIED IDEAL-CUSTOMER-PROFILE.md, CLM-006
Delta vs PILOT-OFFER.md	Adds the founder's staff-time and satisfaction metrics and the named conversion-readiness metric; keeps all exclusions	DRAFT

A.7 Pilot-length conflict VERIFIED flagged open decision

Source	Value
PILOT_WEEKS = 26 , pilotReadiness flags duration unless the days equal 182	VERIFIED app/src/lib/gtm/pilot.ts , D-134, docs/PAID-PILOT-FRAMEWORK.md
Deal desk outer limit 6 months	VERIFIED governance/deal-desk.ts , PAID-PILOT-FRAMEWORK.md
Founder planning assumption: one academic term or 8-12 weeks	ASSUMPTION

Treatment in this playbook: the 8-12 week figure is used as the planning assumption for the sales motion and model timing; the 26-week figure is the code-enforced rule and the only value pilotReadiness accepts. An 8-12 week pilot would be reported as a duration problem today. The founder decides; the decision is recorded as docs/decisions/D-<pull request number>.md per CLAUDE.md (opened by the lead). Until decided, proposals state "[PILOT LENGTH TO BE CONFIRMED]".

3. ICP and buyer map

B.1 Institutional ICP

	Primary ICP	Secondary ICP
Who	Private or regional four-year institution, school, program or student-success unit able to isolate one 50-200 cohort around a registration, orientation, transfer, first-term or advising milestone	Honors / learning community / first-year or transfer program; college or department advising unit
Must have	concrete planning/readiness problem; empowered sponsor and operational champion; named IT/security/privacy/accessibility contacts; manual or read-only scope; minimum-necessary low-risk data; 3-5 leading indicators and guardrails; weekly review and a decision date; clean offboarding	same, with lighter integration expectations
Disqualify	immediate SIS/LMS replacement; official writeback; authoritative degree audit; institution-wide entry launch; unsupported certification/SLA; 24/7 support; causal outcome guarantee; individual risk scoring; health/disability/conduct/counseling/immigration/aid/discipline data	same
Label	VERIFIED IDEAL - CUSTOMER - PROFILE .md	VERIFIED MARKET - SEGMENTATION .md priorities 2-3

Delta: the founder's wedge lists "academic department leadership" as a buyer; the repository ranks the department-led motion second ([SEGMENT-MOTIONS-AND-BUYING-COMMITTEES.md](#)) and requires the same data-flow, privacy, accessibility and procurement review at any price. **DRAFT**

B.3 Buyer, champion, technical, procurement and end-user maps **DRAFT**

Role in committee	Typical title (confirm in discovery)	Decides / does	Evidence they ask for	Source
Economic buyer / executive sponsor	provost office, VP Student Success/Affairs, dean	authorizes bounded outcome, budget, stop/expand	charter, scorecard, cost, decision date	BUYER-PERSONAS.md
Champion	student-success/advising leader, registrar-adjacent lead	runs the workflow, owns weekly review	journey UAT, first-win evidence, support and guardrails	BUYER-PERSONAS.md
Operational champion (pilot)	program coordinator	setup, training, support, offboarding	runbooks, escalation	BUYER-PERSONAS.md
Technical buyer	CIO / IT / identity	architecture, identity, integration	data-flow, roles/isolation, monitoring, recovery	BUYER-PERSONAS.md
Security / privacy	CISO, privacy officer, registrar (FERPA)	purpose, access, retention, incident, rights	target tests, subprocessors, lifecycle, incident evidence	docs/trust/
Accessibility	disability services / accessibility lead	accessibility review	testing evidence and limits, no conformance claim	CLM-007, CLM-008
Procurement / legal	purchasing, counsel	paper, DPA, insurance, service terms	counsel-approved terms and attachments	BUDGET-AND-PURCHASING-PATH.md
End users	students, advisors	use it	usability, agency, privacy	USER-PERSONAS.md
Administrator	institution admin	tenant, roles, policy	least privilege, readback, audit	USER-PERSONAS.md
AI policy owner	where the pilot uses AI features	AI use approval	CLM-011 evidence	INSTITUTIONAL-GTM-PLAYBOOK.md

Map all of these before [outcome_workshop](#) ([SALES_EXIT.outcome_workshop](#) requires IT, privacy, accessibility and academic sponsor). Record actual person, authority, objection, evidence request and decision process; personas are interview hypotheses, never demographic stereotypes.

B.4 Account scoring model **ASSUMPTION** [VERIFIED structure]

Canonical: [ACCOUNT-SCORING-AND-FORECAST.md](#) . Two 0-20 scores, ten 0-2 criteria each, therefore **equal weight (max 2 points per criterion)**; bands, the 90-day staleness window and the two-business-day inbound response target are explicitly **proposed and uncalibrated**.

Score	Question	Criteria (0-2 each)	When
Target score	Which accounts do we approach first?	urgent milestone; 50-200 cohort fit; champion access; economic buyer; procurement feasibility; manual/read-only fit; timing; evidence value; implementation capacity; reference potential	at <code>target_account</code>
Qualification score	Real enough to spend delivery effort on?	urgent milestone; defined cohort; empowered champion; economic buyer; security/privacy/accessibility contacts; budget/procurement path; 30-60 day implementation feasibility; manual/read-only fit; measurable baseline/outcome; conversion decision date	from <code>discovery</code> , to enter <code>qualified</code>

Band	ASSUMPTION	Target score action	Qualification score action
16-20 (Tier A)		pursue, within capacity cap of three active pursuits	qualified, subject to red flags
11-15 (Tier B)		discovery only if capacity; record the gap	hold or nurture
0-10 (Tier C)		hold; record reason and future-contact rule	disqualify or revisit

Automatic disqualifiers override any total: prohibited high-impact AI; surveillance or individual risk scoring; unsupported compliance/certification requirement; required SIS/LMS write before approval; no lawful data authority; no champion; demand to waive P0/P1; economics below delivery and support cost. Every point cites a dated observation; never infer from institution type, size or prestige. "Reference potential" orders who to approach and never appears in a customer-facing document (CLM-013). VERIFIED

ACCOUNT - SCORING - AND - FORECAST .md .

4. Pricing and packaging assumptions

Planning assumptions only. No price is approved (claim CLM-015). Four student prices and several pilot lengths conflict across the repository; the tables below name each.

1. Planning assumptions supplied by the founder ASSUMPTION

All rows are ASSUMPTION and [DECISION OPEN]. Source column: "brief" is the user's planning input (not evidence).

#	Input	Planning value	Unit	Source	Notes
P 1	Student Premium, monthly	\$8.99	per month	brief	Conflicts with D-134 and D-1154 (section 3.1)
P 2	Student Premium, annual	\$69	per year	brief	Equivalent to \$5.75 per month
P 3	Institutional platform fee	\$18	per enrolled student per year	brief	Unit is enrolled ; the finance model prices per active student
P 4	Annual platform minimum	\$30,000	per institution per year	brief	
P 5	Institutional AI included pool	2,400	governed requests per enrolled student per year	brief	= 200 per month planning average; pooled across the institution
P 6	AI overage	\$30	per 1,000 requests beyond the pool	brief	= \$0.03 per request
P 7	Implementation fee	\$35,000 to \$150,000	one-time	brief	Driven by integrations, migration, security review, tenant configuration, training, onboarding, rollout, support complexity
P 8	Premium support	15% of annual platform fee, minimum \$15,000	per year	brief	Not sellable until staffed support is evidenced
P 9	Partner / marketplace commission	12%	of partner order value (basis undefined)	brief	Modelled separately; the core business must be viable without it

Definitions needed before any use [DECISION OPEN]: "enrolled student" (headcount at census date? FTE?); "governed request" (one model call? a dollar-weighted unit? see 4.3); "pooled" (unused capacity does not carry over?); true-up and audit rights for enrolment counts.

3. Conflict tables [DECISION OPEN]

3.1 Individual student price

Source	Monthly	Yearly	Status of the source
D-134 (docs/DECISION-LOG.md , 2026-09-29) and migration supabase/migrations/20260929131000_plu s_price.sql	\$7.99 (Plus)	\$59	Owner decision; catalog and pricing page still print it; billing held VERIFIED
D-1154 (2026-10-04)	\$15	not stated	Owner decision replacing D-134; catalog, pricing page and plans.test.ts not yet changed; which plan carries \$15 undecided VERIFIED
Code and catalog (app/src/lib/membership.ts , app/src/lib/billing/* , commercial_prices)	\$7.99	\$59	Implementation state, not an approved price [VERIFIED by grep of D-134 strings in app/src]
docs/commercial/PRICING-UNIT-ECONOMICS-ARCHITECTURE.md	Plus \$7.99; Pro \$14.99 (proposed)	Plus \$59; Pro \$99	Proposal; owner question 1 asks whether these are the price book
docs/finance/02-PRICING-PACKAGING-ENTITLEMENTS.md , assumption-register.md A-011/A-012	\$7.99	\$59	Model input labelled FACT (before D-1154)
User's brief	\$8.99	\$69	Planning assumption

Source	Monthly	Yearly	Status of the source
Authoritative today	None approved.	None approved.	CLM-015 PROHIBITED

Decision needed: founder selects the individual price book (monthly, yearly, which plan), supersedes D-134 or D-1154 explicitly, and the lead reconciles catalog, pricing page and tests in one change. Until then the finance model carries all four as scenarios.

3.2 Pilot length

Source	Value
PILOT_WEEKS = 26 (app/src/lib/gtm/pilot.ts); D-134; docs/PAID-PILOT-FRAMEWORK.md; finance A-025	26 weeks, exactly 182 days; pilotReadiness fails other lengths VERIFIED
DEAL_POLICY.maxPilotMonths	6 months maximum VERIFIED
User's brief	One academic term or 8-12 weeks ASSUMPTION
Authoritative today	26 weeks (code-enforced); the 8-12 week reading is unadopted. Decision needed: keep 26, change PILOT_WEEKS by dated decision, or define a shorter sprint. See ../customer-success/ONBOARDING_WORKFLOW.md section 1.2.

3.3 Institutional price and structure

Item	Repository (source)	User's brief	Authoritative today
Number and unit	D-1154 item 2: match Blackboard, Canvas and comparable systems; "No number is set"; unit (enrolled, active, sponsored seat, platform fee) "stays open"	\$18 per enrolled student per year	None
Pilot	finance 02/A-026/A-028: \$12,000 software + \$15,000 implementation, 125 students (PROPOSED)	n/a (pilot fee not specified)	None
Department	finance A-034/A-036/A-037: \$35,000 + \$10 per active student + \$40,000 implementation (PROPOSED)	n/a	None
Institution	finance A-044/A-046/A-047: \$90,000 + \$11 per active student + \$120,000 implementation (PROPOSED)	\$18 per enrolled, \$30,000 minimum	None
Minimum ACV	DEAL_POLICY.minimumAcvCents : pilot \$15,000; department \$25,000; campus \$75,000; system \$200,000 (proposed defaults)	\$30,000	None
Implementation	finance \$15,000 / \$40,000 / \$120,000; implementationFeeFloorCents \$10,000; architecture doc: replace floor with per-tier floor from measured hours	\$35,000-\$150,000	None
AI included	finance A-078: 12 AI tasks per active student per month (144 per year)	2,400 requests per enrolled student per year (200 per month)	None; the brief's pool is about 16.7 times the model's
AI overage	Open (architecture doc owner question 6)	\$30 per 1,000	None
Premium support	"premium support option" named in the Institution package; no percentage	15%, minimum \$15,000	None
Marketplace / partner commission	finance A-097: 15% take rate; gated	12%	None
Cost floors	Architecture doc 5.3: e.g. campus, 10,000 enrolled, 40% active, 60% target gross margin: base-case floor about \$286,570	\$180,000 platform fee at 10,000 enrolled	See 4.3

Decisions needed: the unit (enrolled versus active); the platform fee and minimum; whether the \$30,000 minimum reconciles with the tier minimums in DEAL_POLICY (it sits above pilot and department, below campus and system); AI pool definition and overage; implementation bands; the premium-support percentage; the commission rate. Each becomes D-<pull request number>.

4. Pricing calculations [ILLUSTRATIVE]

4.1 Formulas

Let E = enrolled students. All amounts in US dollars per year unless stated.

1. Platform fee = $\max(\$30,000, \$18 \times E)$
2. Included AI pool (requests per year) = $2,400 \times E$ (planning average 200 per month per enrolled student)
3. Overage fee = $\$30 \times (\max(0, \text{requests used} - \text{pool}) / 1,000)$
4. Premium support = $\max(\$15,000, 15\% \times \text{platform fee})$ (optional; not sellable until staffed support is evidenced)
5. Implementation = one-time \$35,000 to \$150,000 (a range, not computed from E)
6. Partner commission (modelled separately) = $12\% \times \text{partner order value}$ (basis undefined)
7. Recurring subtotal (year one, excluding implementation and commission) = platform fee + premium support + overage

Thresholds: the platform minimum binds while E is below $\$30,000 / \$18 = 1,666.7$ (so up to 1,666 enrolled). The support minimum binds while the platform fee is below $\$15,000 / 15\% = \$100,000$, i.e. E up to 5,555 when the platform fee is $\$18 \times E$.

4.2 Three worked examples (enrolments and usage are invented)

Line	Case 1: 1,000 enrolled	Case 2: 5,000 enrolled	Case 3: 20,000 enrolled
$\$18 \times E$	\$18,000	\$90,000	\$360,000
Platform fee = $\max(\$30,000, \$18 \times E)$	\$30,000 (minimum binds)	\$90,000 (no)	\$360,000 (no)
Effective price per enrolled student	\$30.00	\$18.00	\$18.00
Included AI pool = $2,400 \times E$	2,400,000	12,000,000	48,000,000
Illustrative usage per student per year	2,000	2,700	2,640
Illustrative requests used	2,000,000	13,500,000	52,800,000
Requests beyond the pool	0	1,500,000	4,800,000
Overage = $\$30 \times (\text{excess} / 1,000)$	\$0	\$45,000	\$144,000
$15\% \times \text{platform fee}$	\$4,500	\$13,500	\$54,000
Premium support = $\max(\$15,000, 15\% \times \text{fee})$	\$15,000 (minimum binds)	\$15,000 (minimum binds; 15% would be \$13,500)	\$54,000 (no)
Recurring subtotal (platform + support + overage)	\$45,000	\$150,000	\$558,000
Implementation (one-time range)	\$35,000-\$150,000	\$35,000-\$150,000	\$35,000-\$150,000
Which minimums bind	Platform minimum and support minimum	Support minimum only	Neither

Arithmetic check: $1,000 \times 18 = 18,000 < 30,000$; $5,000 \times 18 = 90,000$; $20,000 \times 18 = 360,000$. Support: $15\% \times 30,000 = 4,500$; $15\% \times 90,000 = 13,500$; $15\% \times 360,000 = 54,000$. Pools: $2,400 \times 1,000 = 2,400,000$; $2,400 \times 5,000 = 12,000,000$; $2,400 \times 20,000 = 48,000,000$. Overage case 2: $(13,500,000 - 12,000,000) / 1,000 = 1,500$; $1,500 \times 30 = 45,000$. Case 3: $52,800,000 - 48,000,000 = 4,800,000$; $4,800 \times 30 = 144,000$. Sums: $30,000 + 15,000 + 0 = 45,000$; $90,000 + 15,000 + 45,000 = 150,000$; $360,000 + 54,000 + 144,000 = 558,000$.

Note: the brief's own check figures list \$13,500 for case 2 support; that is the 15% amount before the \$15,000 minimum applies. Under the stated rule the charge is \$15,000.

4.3 Cross-checks against existing repository numbers

DRAFT

REVIEW: accounting

Check	Result	Consequence
DEAL_POLICY minimum ACV by tier	\$30,000 passes pilot (\$15,000) and department (\$25,000); fails campus (\$75,000) and system (\$200,000). Case 2 (\$90,000 platform) passes campus; case 3 (\$360,000) passes system	A 1,000-student institution can only be a pilot or department tier deal under current defaults
AI cost at the architecture doc's blended routed-call cost (\$0.033 per call at list, PRICING-UNIT-ECONOMICS-ARCHITECTURE.md section 5)	If every pooled request were a routed call: $2,400 \times \$0.033 = \mathbf{\$79.20 \text{ per enrolled student per year at full use}}$, versus an \$18 platform fee. The overage price (\$0.03 per request) is below that blended cost	Pool and overage price may be loss-making at high utilisation. "Request" is not the architecture doc's unit (dollar-weighted AI units, 1 cent each); definition and metering must be settled before the pool is a model input
Finance model A-078	12 tasks per active student per month included; the brief's 200 per month is about 16.7 times larger	Model rows need updating or the pool needs a reduced planning average
Cost floors (architecture doc 5.3)	Base-case floors per tier are several times the platform fee at the brief's rate (campus 10,000 enrolled: floor about \$286,570 versus \$180,000)	Gross margin target not evidenced at \$18 per enrolled

Check	Result	Consequence
Enrolled versus active	Price per enrolled with 40% active implies \$45 per active student; the finance model uses \$10-\$11 per active plus a platform fee	Different structures; reconcile in the lead's model

5. Customer acquisition funnel

1. Funnel-to-code crosswalk [VERIFIED against `stages.ts` ; mapping judgments are

DRAFT

SALES_STAGES, in order: `target_account`, `discovery`, `qualified`, `multi_stakeholder_demo`, `outcome_workshop`, `technical_review`, `security_privacy_accessibility_review`, `proposal`, `pilot_or_implementation_SOW`, `procurement_legal`, `contracted`, `implementation`, `live`, `renewal`, `expansion`, `closed_lost`. ACCOUNT_STATUSES: `target`, `engaged`, `pilot`, `customer`, `paused`, `closed_lost`.

#	Funnel stage (founder)	Code stage identifier(s)	ACCOUNT STATUS	Match	Held now?
1	Target account	<code>target_account</code>	<code>target</code>	exact	no
2	Contacted	<code>none</code>	<code>target</code> (unchanged)	GAP: no code stage; evidenced by the first <code>email_sent</code> activity while the opportunity stays <code>target_account</code>	no
3	Discovery	<code>discovery</code>	<code>engaged</code>	exact	no
--	(not in the funnel)	<code>qualified</code>	<code>engaged</code>	code stage with no funnel stage: a gated step between Discovery and Demo	no
4	Demo	<code>multi_stakeholder_demo</code>	<code>engaged</code>	exact (synthetic data only)	no
5	Pilot design	<code>outcome_workshop</code>	<code>engaged</code>	partial: <code>outcome_workshop</code> is "buying committee mapped", measures and baselines agreed. The pilot plan itself is the <code>pilot_or_implementation_SOW</code> gate	no
6	Security/procurement	<code>technical_review</code> , <code>security_privacy_accessibility_review</code>	<code>engaged</code>	partial: formal procurement and legal review is <code>procurement_legal</code> , which in code comes after the proposal and SOW; in the funnel it is mentioned earlier	no
7	Pilot proposal	<code>proposal</code> , <code>pilot_or_implementation_SOW</code>	<code>engaged</code>	exact for <code>proposal</code> ; <code>pilot_or_implementation_SOW</code> requires "a pilot plan with no readiness problems"	<code>proposal</code> open as non-binding scoping only; <code>pilot_or_implementation_SOW</code> HELD
8	Contracting	<code>procurement_legal</code> , <code>contracted</code>	<code>engaged</code> , <code>pilot</code>	exact (two code stages)	HELD
9	Activated pilot	<code>implementation</code> , <code>live</code>	<code>pilot</code> , <code>customer</code>	<code>implementation</code> is configure and train in sandbox data mode; <code>live</code> is activation (launch council go)	HELD
10	Successful	<code>none</code>	<code>customer</code> (while in <code>live</code>)	GAP: no stage. It is an evidence state inside <code>live</code> , governed by the pilot-complete rule below	HELD
11	Annual conversion	none as a stage; <code>renewal</code> is entered by a signed final pilot verdict	<code>customer</code>	GAP / partial: the annual order is a new transaction (convert is a new proposal and review); the code has no separate stage for negotiating it. Treat as a new opportunity record, not a move	HELD
12	Expansion / Renewal	<code>expansion</code> , <code>renewal</code>	<code>customer</code>	exact (two code stages; renewal of an annual contract is its own opportunity 120 days before term end, per <code>SALES-PIPELINE-DEFINITIONS.md</code>)	HELD
13	Closed-lost	<code>closed_lost</code>	<code>closed_lost</code>	exact; reachable from anywhere; reopens only as a new <code>target_account</code>	no
14	Dormant	none; account status <code>paused</code>	<code>paused</code>	GAP: <code>paused</code> is an account status entered from any stage and left back to the stage it was in; it is not a stage	no

GAP register (no code stage; nothing invented)

GAP	What exists instead	Proposed handling now	What a code change would need (engineering, not done here)
G1 Contacted	first_email_sent activity	Report "Contacted" as a view: target_account opportunities with at least one email_sent activity	A stage or a derived flag; stages.test.ts fails if a stage disappears from documents, so any new stage needs documentation in SALES-PIPELINE-DEFINITIONS.md and ACCOUNT-SCORING-AND-FORECAST.md
G2 qualified absent from the funnel	SALES_EXIT.qualified	Keep it as a hidden gate; the funnel's "Discovery to Demo" move requires its evidence (salesMoveProblems flags a skip)	None
G3 Success achieved	pilotVerdict signed decision and the measured outcomes	Evidence state on a live opportunity, enforced by the pilot-complete check	A computed state or checklist in the pipeline tables
G4 Annual conversion	renewal entered by a signed final verdict	A new opportunity record of motion "new/annual", never a move of the pilot record, never counted twice	A motion field and a link from pilot to annual opportunity
G5 Dormant	account status paused	Use paused with future_contact_rule; the stage the opportunity was in is retained	None (status exists)
G6 Funnel order of procurement vs proposal	code order	Follow the code: security and technical review, then proposal and SOW, then procurement_legal	None
G7 Pilot design vs pilot plan	outcome_workshop vs pilot_or_implementation_SOW	Keep both; pilot design session output is the draft plan	None

Move rules, enforced by salesMoveProblems(from, to, met): forward only; a gated stage cannot be skipped; entering a gated stage needs its SALES_EXIT evidence in met; closed_lost from anywhere; a lost deal reopens only as a new target_account with fresh discovery. A regression (evidence later found false) pauses the account and blocks forward movement; it never moves backward.

Model shape DRAFT

Monthly, 36 months, first month 2026-11. Model years run November to October so each holds one academic start.

- Funnel.** Accounts contacted per month pass through six stage rates to a proposal, then a close rate. A signed pilot lands salesCycleMonths after first contact and never before firstPaidPilotMonth. Deals ready earlier wait for that month rather than being booked, because a paid institutional pilot is NO-GO today (GO-NO-GO-DECISION.md).
- Cohorts.** A signed pilot becomes an annual customer after pilotMonths + conversionLagMonths, with probability activation x success x pilot-to-annual conversion. A share (directAnnualShare) skips the pilot. Each annual cohort shrinks by retention at each anniversary and its enrolled scope grows by expansion.
- Revenue is recognised over the service period; cash follows the invoice by the payment terms.** Pilot fee and implementation fee are billed at signing and recognised straight-line. Platform and premium support are billed annually up front and recognised monthly. AI overage is billed monthly. Student Premium is collected monthly.
- Costs.** Cost of revenue: cloud and AI per active user, support per institution, implementation third-party cost and contractor overflow, payment fees, delivery payroll. Operating expense: payroll by function and year, contractors, marketing, legal, insurance, accounting, software, travel, admin. One-time **required obligations** (security assessment, accessibility review, counsel, entity and insurance) are cash items tied to GO-NO-GO blockers 2 to 5.
- Cash.** Opening cash, plus funding, plus collections, less cash out. Runway, break-even and funding need follow.

Expected values are fractional by design (0.3 of a pilot is an expectation, not a customer). The screen rounds to three significant figures; exports carry whole dollars.

6. Sales process

D.12 Sales stages and exit criteria VERIFIED exact ids from `app/src/lib/gtm/stages.ts`

Account status mapping: `ACCOUNT_STATUS_OF`. Coded gate = `SALES_EXIT` (seven stages); the other nine are checklist-gated by `ACCOUNT-SCORING-AND-FORECAST.md`. Moves are forward-only; `closed_lost` reachable from anywhere and reopens only as a new `target_account`.

#	Stage id	Account status	Exit evidence (coded <code>SALES_EXIT</code> text in quotes; else checklist)	Gate today
1	<code>target_account</code>	target	target score recorded with cited observations; no disqualifier; real warm path; owner	allowed
2	<code>discovery</code>	engaged	authorized stakeholder met; problem, milestone, cohort, data need, procurement path recorded; qualification score; dated next step	allowed
3	<code>qualified</code>	engaged	"A named champion, a stated problem in their words, a budget cycle and a decision process."	allowed
4	<code>multi_stakeholder_demo</code>	engaged	synthetic-only demo; attendee roles; top objection and evidence request logged	allowed
5	<code>outcome_workshop</code>	engaged	"The buying committee is mapped, including IT, privacy, accessibility and the academic sponsor."	allowed
6	<code>technical_review</code>	engaged	architecture questions answered from RFP library; integration stated manual/read-only	allowed (evidence exchange)
7	<code>security_privacy_accessibility_review</code>	engaged	questionnaire answered from RFP library and HECVAT matrix with labels; exceptions owned	allowed (evidence exchange)
8	<code>proposal</code>	engaged	"Security, privacy and accessibility review has started, answered from the RFP library, never from memory."	conditional, non-binding only
9	<code>pilot_or_implementation_SOW</code>	engaged	"A pilot plan with no readiness problems (<code>pilotReadiness</code> in #817)."	held : depends on pilot length decision; no signature
10	<code>procurement_legal</code>	engaged	proposal in formal review; redline register; deal-desk review no refusals	held (paid)
11	<code>contracted</code>	pilot	"Procurement and legal have signed; the deal desk review has no refusals."	held
12	<code>implementation</code>	pilot	handoff accepted; <code>pilotReadiness</code> clean; tenant in sandbox data mode	held
13	<code>live</code>	customer	"The launch council returned go for the first cohort."	held (activation)
14	<code>renewal</code>	customer	"The pilot has a signed, final verdict (<code>pilotVerdict</code> in #817) with outcomes measured."	held
15	<code>expansion</code>	customer	separately authorized scope; adjacent cohort has its own readiness and launch-council go	held
16	<code>closed_lost</code>	<code>closed_lost</code>	reason code, learning, future-contact rule	allowed

D.13 Forecasting method [VERIFIED method; no values]

From `ACCOUNT-SCORING-AND-FORECAST.md`: categories are defined by evidence (Commit = `procurement_legal` or later with a named signer; Best case = `proposal` or `pilot_or_implementation_SOW` with sponsor and budget cycle; Pipeline = `qualified` through `security_privacy_accessibility_review`; Omitted = `target_account`, `discovery`, stale). **Every stage probability is not approved and weighted pipeline is 0**; report counts and unweighted amounts. Report new, renewal, expansion and services separately; never double-count a pilot and its hypothetical annual conversion. No pipeline value, win rate or forecast is asserted anywhere in this playbook.

D.14 Weekly pipeline review DRAFT

Weekly, 45 minutes, owner = founder: every commit/best-case opportunity against evidence; stale next actions; expired proposals; missing approvers; overdue decision-log items (`overdue()` in `pilot.ts`, highest risk first); new scores; capacity check (three active pursuits).

Monthly: re-score tiers, review loss reasons. Output: updated `gtm_accounts` and a one-paragraph note. Agenda detail in the KPI tree meeting table.

D.15 Pilot-to-annual conversion process DRAFT REVIEW: counsel REVIEW: tax

Canonical: `docs/PILOT-TO-ANNUAL-CONVERSION.md` , `RENEWAL-AND-EXPANSION-PLAYBOOK.md` . Steps: (1) the decision date is written into the scope before launch; (2) weekly report from week 1; (3) midpoint executive review; (4) pre-decision reconciliation (contract notice dates, decision authority, evidence, capacity, approved price method); (5) final value report with missingness and caveats; (6) signed verdict (`pilotVerdict` : convert, expand, pause, stop; an extension is not a verdict); (7) annual paper only through counsel-approved terms and the deal desk. A pilot is **not complete** until activation, workflow completion, outcome measurement, executive review and conversion decision are all recorded.

D.16 Expansion and reference process DRAFT

Expansion is adjacent: another cohort, program or approved read-only source, each with its own readiness check and launch-council go; it enters the forecast only after a signed convert/expand verdict. Reference: considered only after accepted scope, no unresolved P0/P1 and a signed permission record (`CUSTOMER-REFERENCE-PROGRAM-DRAFT.md`); participation is separate from price, support and renewal; a discount never buys a statement. No reference exists (CLM-013).

7. The pilot-complete rule: an enforceable stage-exit check DRAFT

A pilot is **not complete until activation, workflow completion, outcome measurement, executive review and conversion decision are all recorded**. "Complete" means the opportunity may be moved to `renewal` , counted in a conversion report or used for any external statement. The check is a stage-exit validation, run when anyone attempts to move a `live` opportunity forward or to mark a pilot complete.

#	Record	Pass condition	Evidence the CRM must hold	Where enforced today
1	Activation	A launch-council go for the cohort exists and the pilot actually started: <code>startDate</code> , cohort, data mode (<code>pilotDataMode</code>), and the hypercare start	Launch-council record; tenant and cohort ID; activation date	<code>live</code> gate in <code>SALES_EXIT</code> (the council go); the activation date itself is not in code [GAP]
2	Workflow completion	The agreed workflow ran for the cohort through its end: a recorded completion measure against the plan, not just logins	Workflow-completion measure with numerator, denominator, source; no individual data; suppressed below ten	not in code [GAP]
3	Outcome measurement	Three to five metrics, each with baseline, target and result and source, at cohort level	<code>PilotPlan.metrics</code> with results; baseline present for every metric	<code>pilotReadiness</code> checks the plan (metric count, baselines); results are not in code [GAP]
4	Executive review	The decision meeting happened with the sponsor and champion, covering metrics, support volume, accessibility reports, cost to serve, known limitations and the recommendation	Meeting record with attendees and the evidence package version (<code>PILOT-EXECUTIVE-OUTCOME-REVIEW.md</code>)	not in code [GAP]
5	Conversion decision	A written, signed final decision: <code>convert</code> , <code>expand</code> , <code>pause</code> or <code>stop</code> , with <code>signedBy</code> , <code>signedAt</code> , and <code>unresolvedHighSeverity</code> equal to 0 for <code>convert</code> and <code>expand</code>	<code>PilotOutcome</code> record	<code>pilotVerdict</code> (<code>final</code> is true only with a signed decision) and <code>SALES_EXIT.renewal</code>

Check procedure.

1. All five rows must show a dated record with an owner. Any blank means the check fails and the opportunity stays `live` (`pilot not complete`).
2. Only when the check passes does the CRM add `renewal` to the `met` set it passes to `salesMoveProblems` . This is the enforcement point: the code only refuses entry into `renewal` without a signed verdict, so the CRM validation supplies rows 1-4.
3. A `stop` or `pause` decision also completes a pilot (the pilot was run and decided) but does not open `renewal` ; it routes to the closeout path (`PILOT-CLOSEOUT-AND-CONVERSION-PLAN.md`).
4. A `convert` decision does not create an annual contract, invoice, entitlement, reference or revenue. It starts a new annual opportunity (GAP G4).
5. An outcome statement for any external audience additionally needs CLM-014 approval and, for naming the customer, CLM-013 and written permission; the pilot-complete check never substitutes for either.

6. Engineering follow-up (not done here): add rows 1-4 as computed checks beside `pilotVerdict` and a test that fails when a pilot reaches `renewal` without them.

7. Pilot proposal framework

Gate (what is allowed now versus held)

Allowed now	HELD
Share this draft for discussion and scoping with a qualified prospect (stage <code>proposal</code> entry needs <code>SALES_EXIT.proposal</code> : security/privacy/accessibility review started, answered from the RFP library)	Quoting or committing any fee, issuing an order form or invoice, accepting payment, loading live data, activating a tenant, committing a launch date, annual conversion terms, any customer reference or logo

`pilotReadiness` in `pilot.ts` VERIFIED returns `no_price` until the annual price is agreed, so a proposal built from this template cannot be "ready to kick off" while prices are `[PRICE TO BE CONFIRMED]`. That is intended.

3. Proposed workflow: Registration Readiness Pilot (default wedge) DRAFT

Students voluntarily use Semester beside existing systems to prepare for [registration / term start]: set up minimum context manually, see Today/This Week, receive one prioritized, source-labelled, reversible action (complete, schedule, snooze or defer), know where to get help, and track a non-authoritative readiness checklist. Official records, registration, grades, aid and advising decisions stay in the institution's systems. Details: `../../../../commercial/PILOT-OFFER.md`.

5. Scope, non-goals, population and timeline

Included: [workflow items from the scope schedule]. **Non-goals (excluded unless separately approved and proven):** official-record writes; live SSO/SIS/LMS/LTI integration; admissions, aid, disability, health, counseling, immigration, discipline or emergency data; individual risk scoring; authoritative advising; automated registration; grade prediction; surveillance; system-of-record replacement. Full list: `../../../../legal-drafts/INSTITUTIONAL-PILOT-PROPOSAL-TEMPLATE-DRAFT.md`.

Population (one cohort, department or program): [PLACEHOLDER: cohort], expected size [N]. Bounds: at least 10 and at most 200 students (the cohort checklist in `../../../../PAID-PILOT-FRAMEWORK.md`; under 10 cannot be reported without identifying people, over 200 cannot be supported by hand). The preferred target is 50-200. VERIFIED that `pilotReadiness` does **not** currently enforce cohort size in code; the bound is a checklist item for the reviewer.

Timeline - [DECISION OPEN] (founder decision; to be recorded as a `D-<pull request number>` decision):

Field	Value
Code-enforced rule	<code>PILOT_WEEKS = 26</code> (182 days) in <code>pilot.ts</code> (D-134): <code>pilotReadiness</code> returns <code>duration</code> unless end minus start is exactly 26 weeks. VERIFIED
Planning assumption (user's brief)	One academic term or 8-12 weeks ASSUMPTION
Which applies to this proposal	[DECISION OPEN: 26 weeks / 8-12 weeks / 26-week pilot with an 8-12-week measured core window]
If 8-12 weeks is chosen	The code rule must change (with a decision record and test) before a plan can pass <code>pilotReadiness</code> ; until then a shorter plan is "not ready to kick off"
If 26 weeks is chosen	A single registration cycle may fall inside a shorter measurement window; state the <i>measurement window</i> separately from the pilot term
Proposed start / end / midpoint / conversion decision	[DATE] / [DATE] / [DATE] / [DATE]. Code rule: conversion decision falls from 14 days before to 30 days after the end date; midpoint date must exist
Implementation window before launch	[30-60 days ASSUMPTION]

Do not send this proposal to a customer with the field unresolved without telling them the length is under review.

10. Success metrics and baseline

Constraint: `pilotReadiness` requires **3 to 5** metrics, each with a baseline (`metric_count`, `metric_baseline`). Of the eight below, choose at most five as **primary** (decision metrics) in the signed plan; the rest are reported as diagnostic. Cohort cells with fewer than **10** people are suppressed (aggregation floor, `../../../../INSTITUTIONAL-GTM-PLAYBOOK.md`); report "suppressed", never zero. Definitions are frozen and versioned before launch. All targets are ASSUMPTION until the customer approves them. Frozen-definition detail: `../../../../commercial/PILOT-SUCCESS-PLAN.md`.

#	Metric	Definition	Numerator / denominator	Source	Baseline	Target	Primary?
M 1	Activation	Eligible student completes approved minimum setup	Students completing setup / eligible invited students	Validated product event, approved roster	[captured by DATE]	[X%] ASSUMPTION	[Y/N]
M 2	First meaningful action	Student reaches Today and intentionally completes, schedules, snoozes or defers one prioritized action	Students with first win within [N] days of setup / activated students (incomplete attempts reported as censored)	Validated event + sample QA	[..]	[..] ASSUMPTION	[Y/N]
M 3	Workflow completion	Approved readiness checklist items completed (non-authoritative)	Completed items / assigned items, per student then aggregated	Checklist aggregate	[..]	[..] ASSUMPTION	[Y/N]
M 4	Weekly active use	Student completes a meaningful planning action in the week (raw logins excluded)	Students with a planning action in week / activated students	Privacy-reviewed aggregate	[..]	[..] ASSUMPTION	[Y/N]
M 5	Staff time / support-friction reduction	Change in staff time on agreed repetitive questions per 100 students	(baseline minus pilot-period contacts in agreed category) / baseline, per 100 students	Customer's helpdesk/case system; minutes from sampled timing	[..]	[..] ASSUMPTION	[Y/N]
M 6	Student confidence / satisfaction	Self-reported clarity and confidence about registration steps	Respondents agreeing / respondents (report response rate)	Approved survey at midpoint and final	[pre-pilot pulse]	[..] ASSUMPTION	[Y/N]
M 7	Support issue reduction	Change in volume of agreed issue category	Pilot-period issues per 100 students / baseline per 100	Customer's support system and Semester's staffed queue	[..]	[..] ASSUMPTION	[Y/N]
M 8	Conversion readiness	Share of the conversion-readiness checklist (final value report) met by the decision date	Items met / items required	Final value report checklist	n/a	all required met	Decision input

Self-reported and usage measures are non-causal. No GPA, retention, graduation or wellbeing claims; nothing is promised (section 14).

11. Cadence, midpoint and final review

Weekly pilot report ([../templates/WEEKLY_PILOT_REPORT.md](#)) and review; midpoint executive review on [DATE] ([../templates/MIDPOINT_EXECUTIVE_REVIEW.md](#)); final value review ([../templates/FINAL_VALUE_REPORT.md](#)) before the conversion decision.

13. Pricing - [PRICE TO BE CONFIRMED] REVIEW: counsel REVIEW: tax

No price is approved (CLM-015 PROHIBITED; [../commercial/PRICING-AND-PACKAGING.md](#)).

Item	Amount	Basiss	Terms
Pilot fee	[PRICE TO BE CONFIRMED] (or "no-fee design-partner term" if approved by authorized paper)	[..]	[..]
Implementation fee	[PRICE TO BE CONFIRMED]	[..]	[..]
Annual conversion price	[PRICE TO BE CONFIRMED]	[..]	Any pilot credit: [none / PLACEHOLDER]
Taxes, expenses, payment schedule, PO requirements	[to be set by authorized paper]		

Acceptance of any paid term is **held** (paid pilot NO-GO/RED).

14. Non-guarantee language REVIEW: counsel

This pilot is a structured evaluation. Semester does not guarantee any outcome, including usage, time or cost savings, retention, graduation, GPA or wellbeing effects. Results depend on the cohort, the baseline and many factors outside Semester's control, and will be reported with their limitations. Conversion is a separate decision for [Institution] and a new transaction; it is never automatic. Either party may decide to stop. Dates and capabilities are plans until both parties accept them in signed paper.

8. Institutional pilot agreement outline

Conflicts counsel should know about VERIFIED

Conflict	Sources	Position here
Pilot length: 26 weeks (code, D-134) versus 8-12 weeks (planning assumption)	PILOT_WEEKS = 26 ; user's brief	[DECISION OPEN] (founder); term is a blank in section 3
Cohort size: trust outline sample says "up to 500 students"; framework bound is 10-200; pilot draft says "proposed 50-200"	../../../../trust/PILOT-AGREEMENT-OUTLINE.md , PAID-PILOT-FRAMEWORK.md , PILOT-AGREEMENT-DRAFT.md	Use 10-200 (target 50-200); the 500 sample is superseded for this outline
Trust outline's sample scope lists SSO and LTI 1.3 as "included"	same	SSO/LTI are planned, not available (CLM-005); not offered in section 4
Price on record for individuals differs (D-134 / D-1154 / assumption)	../../../../decisions/D-1154.md	Irrelevant to institutional fees, which are [PRICE TO BE CONFIRMED]
"extend" (closeout plan) versus expand (code PilotDecision)	../../../../institutional-readiness/PILOT-CLOSEOUT-AND-CONVERSION-PLAN.md , pilot.ts	Counsel should fix the vocabulary: convert / expand / pause / stop in code; "extend" appears only in the closeout doc

Section-by-section outline

Each section: **business position** (what the founder proposes counsel express), **existing drafts and status**, **open issues for counsel**, **flag**. All referenced drafts carry the banner "DRAFT FOR QUALIFIED LEGAL REVIEW" VERIFIED; none is counsel-approved or executed.

1. Parties and effective date REVIEW: counsel

- **Position:** two parties, [SEMESTER ENTITY] and [INSTITUTION ENTITY]; effective date on last signature of authorized signers.
- **Existing:** PILOT-AGREEMENT-DRAFT.md (parties/authority blanks). Entity facts: GO-NO-GO blocking item 5 and launch risk FR-001 in ../../../../LAUNCH-RISK-REGISTER.md : legal entity, jurisdiction, ownership/IP chain and signing authority are **not confirmed**.
- **Open issues:** which entity contracts; whether an entity exists; university IP/funding captures (strategy risk SR-013); founder's enrollment conflict (SR-007); customer signatory authority and delegation limits.

2. Purpose REVIEW: counsel

- **Position:** one bounded, measurable, reversible pilot to test one workflow with one cohort; not a broad deployment or replacement of an official system.
- **Existing:** plain-language summary in PILOT-AGREEMENT-DRAFT.md ; ../../commercial/PILOT-OFFER.md .
- **Open issues:** whether "pilot" and "evaluation" need different paper; evaluation-only status before activation.

3. Term, milestones and termination REVIEW: counsel

- **Position:** term, implementation window, measurement window, midpoint review and conversion decision date are scheduled dates. **Length is [DECISION OPEN] (26 weeks per code versus 8-12 weeks assumption)**. Conversion decision within -14/+30 days of end date (code rule). Either party may stop for convenience on [PLACEHOLDER] notice; Semester may pause for safety, privacy, accessibility or integrity guardrails; consequences of stop: export, revocation, deletion.
- **Existing:** PILOT-AGREEMENT-DRAFT.md (launch, change, pause, closeout); ../../institutional-readiness/PILOT-CLOSEOUT-AND-CONVERSION-PLAN.md .
- **Open issues:** termination rights and notice; effect on prepaid fees; survival clauses; what "activation" means contractually (separate from signature).

4. Scope, cohort, permitted use and non-goals REVIEW: counsel

- **Position:** one cohort of 10-200 students; manual/read-only data; permitted use limited to the pilot purpose; non-goals: official-record writes, live SSO/SIS/LMS/LTI, admissions/aid/disability/health/counseling/immigration/discipline data, individual risk scoring, automated registration, grade prediction, surveillance, system-of-record replacement.
- **Existing:** PILOT-AGREEMENT-DRAFT.md (included/excluded); ../../legal-drafts/INSTITUTIONAL-PILOT-PROPOSAL-TEMPLATE-DRAFT.md ; ../../legal-drafts/STATEMENT-OF-WORK-TEMPLATE-DRAFT.md .

- **Open issues:** minors/guardian authority and jurisdictions before consent clauses (see [../../legal-drafts/MINORS-AND-GUARDIAN-OPERATIONS-DRAFT.md](#)); student voluntariness language; scope-change procedure.

5. Customer responsibilities REVIEW: counsel

- **Position:** name sponsor, champion, IT, security, privacy, accessibility, procurement and support contacts; provide lawful authority and minimum data; approve communications; validate sources; perform UAT; attend weekly/midpoint/final reviews; provide baseline data.
- **Existing:** [PILOT-AGREEMENT-DRAFT.md](#) (governance and responsibilities); [../../legal-drafts/IMPLEMENTATION-RESPONSIBILITY-MATRIX-DRAFT.md](#).
- **Open issues:** consequence of non-performance (dates move, not breach?); customer data-authority warranty.

6. Semester responsibilities (verified commitments only) REVIEW: counsel

- **Position:** only what exists and is evidenced: configure approved scope; provide training and documented support route; supply evidence and aggregate reporting; export, revocation, deletion at close. No commitment to integrations, uptime, response times, certifications or outcomes (CLM-005, -010, -014, -016).
- **Existing:** [PILOT-AGREEMENT-DRAFT.md](#); evidence state in [../../trust/EVIDENCE-REGISTER.md](#); [../../PUBLIC-CLAIMS-APPROVAL-REGISTER.md](#).
- **Open issues:** staffing: support, security, implementation owners are unassigned (GO-NO-GO #6); single-founder dependency; subcontracting.

7. Fees, invoicing, payment, implementation, taxes, expenses REVIEW: counsel REVIEW: tax

- **Position:** pilot fee, implementation fee, annual conversion price are all **[PRICE TO BE CONFIRMED]**; payment schedule, PO, tax treatment and expenses by authorized paper; no pilot credit unless stated. Planning assumptions for internal use only are in [../sales/PILOT_PROPOSAL_TEMPLATE.md](#) appendix A INTERNAL.
- **Existing:** [../../legal-drafts/ORDER-FORM-TEMPLATE-DRAFT.md](#); [../../legal-drafts/PROFESSIONAL-SERVICES-TERMS-DRAFT.md](#); [../../legal-drafts/REFUND-CANCELLATION-AND-RENEWAL-POLICY-DRAFT.md](#).
- **Open issues:** entity, tax registration and nexus, sales-tax treatment of software and services, invoicing/billing controls (checkout and billing remain held by code), revenue-recognition review ([../../commercial/REVENUE-RECOGNITION-REVIEW-CHECKLIST.md](#)) REVIEW: accounting, refund and suspension rights, AI usage limits and any overage. Payment is NO-GO today.

8. Success metrics, baseline, reporting and non-guarantee REVIEW: counsel

- **Position:** 3-5 primary metrics with frozen baseline, source, owner, cadence and a privacy floor of 10; weekly and final reporting; stated limitations; **no guarantee of outcome**; logins alone are not success; no causal claim without design.
- **Existing:** [PILOT-AGREEMENT-DRAFT.md](#) (success and guardrails); [../../commercial/PILOT-SUCCESS-PLAN.md](#), [PILOT-SCORECARD.md](#), [WEEKLY_PILOT_REPORT.md](#), [FINAL_VALUE_REPORT.md](#).
- **Open issues:** who owns baseline data quality; remedy when baseline is unavailable; limitation-of-liability interaction with reports.

9. Data protection REVIEW: counsel REVIEW: privacy

- **Position:** roles (institution controller or school official / Semester processor or vendor, as counsel determines); categories (minimum identity/course/deadline context as approved; excluded sensitive categories); processing purposes limited to the pilot; retention, deletion and return at close; DPA reference; subprocessor list and change notice; AI-provider boundary.
- **Existing:** [../../legal-drafts/DATA-PROCESSING-ADDENDUM-DRAFT.md](#); [STUDENT-DATA-PRIVACY-ADDENDUM-DRAFT.md](#); [DATA-RETENTION-EXPORT-AND-DELETION-EXHIBIT-DRAFT.md](#); [SUBPROCESSOR-LIST-TEMPLATE-DRAFT.md](#); [AI-USE-TERMS-EXHIBIT-DRAFT.md](#); trust: [../../trust/DPA-CHECKLIST.md](#), [../../trust/SUBPROCESSOR-GOVERNANCE-PROGRAM.md](#), [../../trust/DATA-RETENTION-AND-DELETION-STANDARD.md](#).
- **Open issues:** FERPA role, state student-privacy statutes, minors, data residency (none promised), backup-tail deletion, legal hold, audit rights.

10. Security, incident notification, support, availability, accessibility and service limits REVIEW: counsel

REVIEW: security REVIEW: accessibility

- **Position: only as verified and approved.** Security: state controls as evidenced (repository-tested) and independent assessment as not yet done; incident notice window [PLACEHOLDER - none approved]; support: best-effort hours and channel in writing; availability:

no uptime figure; accessibility: automated checks only, known limitations and alternative path; service limits: cohort cap, AI capacity limits as per approved scope.

- **Existing:** [../legal-drafts/INFORMATION-SECURITY-ADDENDUM-DRAFT.md](#) ; [SECURITY-INCIDENT-NOTIFICATION-EXHIBIT-DRAFT.md](#) ; [SERVICE-LEVEL-EXPECTATIONS-DRAFT.md](#) ; [SUPPORT-POLICY-EXHIBIT-DRAFT.md](#) ; [ACCESSIBILITY-ROADMAP-EXHIBIT-DRAFT.md](#) ; trust: [../trust/SLA.md](#) (pilot is best-effort, not credit-bearing), [../trust/INCIDENT-RESPONSE-PLAN.md](#) .
- **Open issues:** no independent assessment, DAST, qualified accessibility review or measured uptime exists (GO-NO-GO #2, #3, #6); incident-notice duty and statutory timing by jurisdiction; whether any SLA credit is ever appropriate for a pilot (position: none).

11. Confidentiality, IP, feedback, publicity and reference rights, warranties, liability, indemnity, governing law, order of precedence REVIEW: counsel REVIEW: insurance

- **Position:** mutual confidentiality; Semester owns product IP; customer owns its data; feedback licence; **no publicity, logo, quote, reference or case study without separate claim-specific written permission** (CLM-013); warranties limited and non-absolute; liability and indemnity to be allocated by counsel against insurance actually held; governing law and venue by counsel; order of precedence (agreement, DPA, SOW, exhibits).
- **Existing:** [../legal-drafts/CONFIDENTIALITY-NDA-MUTUAL-DRAFT.md](#) ; [BETA-TERMS-AND-FEEDBACK-AGREEMENT-DRAFT.md](#) ; [TESTIMONIAL-AND-CASE-STUDY-CONSENT-DRAFT.md](#) ; [MASTER-SUBSCRIPTION-AGREEMENT-DRAFT.md](#) ; [EVALUATION-AGREEMENT-DRAFT.md](#) ; deviation rules in [CONTRACT-DEVIATION-APPROVAL-MATRIX.md](#) and [CONTRACT-NEGOTIATION-PLAYBOOK.md](#) .
- **Open issues:** cyber/E&O insurance is not bound (GO-NO-GO #5), so any uncapped indemnity or high cap is unmanageable (strategy risk SR-021); university IP policy (SR-013); public-entity customers' governing-law constraints; customer paper precedence.

12. Annual conversion option REVIEW: counsel

- **Position: optional, not automatic.** Conversion is a new transaction decided by the customer on the decision date after the final value review; no auto-renewal, no price lock unless a price is separately approved. If counsel advises that a conversion option or pilot credit is unwise before a price book exists, drop it and keep conversion as a non-binding intent.
- **Existing:** [../PILOT-TO-ANNUAL-CONVERSION.md](#) ; [../institutional-readiness/PILOT-CLOSEOUT-AND-CONVERSION-PLAN.md](#) ; [pilotVerdict](#) (no signed decision means no outcome; convert/expand blocked by unresolved high-severity issues).
- **Open issues:** price basis, pilot credit, term, notice, what happens to data if no conversion.

Counsel issue summary INTERNAL

Issue	Blocks	Authority
Entity, signing authority, IP chain	Any signature	Counsel, founder
Insurance bound	Liability/indemnity position	Broker, counsel REVIEW: insurance
DPA approval, student-privacy regime, minors	Live data	Counsel REVIEW: privacy
Tax and accounting of fees	Invoice	CPA/tax REVIEW: tax
Independent security, accessibility evidence	Security/accessibility clauses	Qualified assessors
Pilot length decision	Term	Founder (D-)

9. Sales email sequence summary

Gate (what is allowed now versus held) VERIFIED

Source: [GO-NO-GO-DECISION.md](#) (2026-10-03). Design-partner institutional work is **GO / GREEN** for non-activation engagement only: discovery, synthetic demos, evidence exchange, fit and limitation review, conditional scoping. The **paid institutional pilot is NO-GO / RED**: no payment, no unconditional launch obligation, no live data, no tenant activation. Broad enterprise sale is NO-GO / RED. Conversion rule: any conflict resolves to the more conservative boundary.

Sequence	Name	Gate	Allowed now?
1	Cold outreach: problem-led introduction	Design-partner discovery (GREEN, non-activation)	YES
2	Follow-up: scoped, low-risk pilot explanation	Design-partner discovery	YES (scoping conversation only; "pilot" means design-partner scoping)
3	Follow-up: security and procurement readiness	Evidence exchange (GREEN)	YES (status stated honestly: drafts, gaps visible)
4	Breakup and referral request	Design-partner discovery	YES
5	Post-discovery follow-up	Discovery (GREEN)	YES
6	Post-demo follow-up	Synthetic demo (GREEN)	YES (synthetic data only)
7	Pilot-design-session invitation	Conditional scoping (GREEN)	YES (no live data, no commitment)
8A	Scoping summary delivery (non-binding)	Conditional scoping	YES (no price, no order form, no launch date)
8B	Pilot proposal delivery with price	HELD : paid pilot NO-GO	NO (template only)
9A	Security and procurement evidence follow-up	Evidence exchange	YES
9B	Order form, DPA execution, vendor onboarding, invoicing	HELD : paid pilot NO-GO; counsel-approved paper absent	NO
10A	Executive sponsor follow-up (non-binding)	Conditional scoping	YES
10B	Sponsor sign-off on price, launch or contract	HELD	NO
11	Mid-pilot executive update	HELD : no pilot can be activated	NO (design-partner scoping-status variant 11-DP allowed)
12	Pilot results and annual conversion	HELD : no pilot, no outcomes, no annual price	NO (non-activation scoping-results review 12-DP allowed)
13	Renewal and expansion	HELD : no customer, contract or term	NO (no variant is sensible; use sequence 15)
14	Case-study and reference request	HELD : CLM-013 PROHIBITED TODAY	NO (feedback-and-corrections variant 14-DP is not a reference request)
15	Re-engagement of dormant opportunities	Design-partner discovery	YES (no price, no pilot offer beyond scoping)

Exact gate condition for every HELD row [VERIFIED, then HELD]: the paid-pilot motion returns to GO only when [GO-NO-GO-DECISION.md](#) blocking priorities 1-9 are closed with retained evidence, a bounded design-partner engagement has an approved activation record and a measured closeout, the release profile [paid-institutional-manual-pilot](#) in [release-profiles.ts](#) passes for the named target (contract: [PILOT-AND-INDIVIDUAL-RELEASE-PROFILES.md](#)), and a dated decision supersedes the 2026-10-03 one. Additional unlocks: price wording needs CLM-015 approval (Founder, Finance, Tax, Legal); results or conversion wording needs CLM-014; any named customer, logo, quote or case study needs CLM-013 plus the customer's claim-specific written permission. A template marked HOLD is never sent, forwarded, attached or paraphrased in another email.

1.1 Account-based, not spam: the reason-for-outreach test (RFO test)

An email is sent only to a named person at an account that scored on the target score ([ACCOUNT-SCORING-AND-FORECAST.md](#)) and only when the sender can pass **all seven** checks below and has recorded the result **before** sending. **No reason, no send**. Volume, list size, enrichment or a template deadline are never a reason.

#	Check	Pass condition	Fail example
R 1	Specific	Names one concrete thing: an initiative, page, announcement, appointment, launch, posted process, or introduction	"Your institution is a leader in student success"
R 2	Verifiable	The recipient could confirm it from a public URL, a published document, or a named referrer who agreed to be named; the source is recorded	"I heard students are frustrated"
R 3	Recent	Observed within 12 months; a leadership change within 6 months [ASSUMPTION; owner may tighten]	A five-year-old strategic plan
R 4	Relevant	There is a one-sentence link from the reason to student planning, registration readiness, or advising workflow	A new stadium
R 5	Role-fit	The recipient's role plausibly owns or influences that process (persona in 1.2)	A registrar emailed about a research-compute grant
R 6	Fair	States what the source says, without inventing a failure, praising empty, or implying inside knowledge	"I noticed your registration is broken"
R 7	Clean source	Comes from institution-owned or public documents, public news or a consenting referrer. Never from a student's personal post, a private forum, scraped personal profiles, or student records; never names or quotes a student	A screenshot of a student's social post

Accepted reason types (record one in the `rfo_type` field of the personalization record, section B.1): `public_initiative` (strategic plan, program launch, term-start change), `leadership_change`, `public_process_page` (an institution-published registration or advising page, or a public report, accreditation self-study or student-government document describing a registration-process difficulty), `program_launch`, `published_rfp_or_notice`, `speaker_or_publication` (the recipient's own public talk or article), `referral` (with the referrer's permission to name them), `inbound_request` (they contacted Semester). A reason is single-use per account run: do not recycle one reason across touches as if it were new; later touches reference the earlier reason or add genuinely new information.

2. Cadence overview ASSUMPTION: all intervals are business days and may be changed by the owner

Seq	Touch	Day	Stage at send	Stops when
1	1.1 cold introduction	0	<code>target_account</code> (<code>target</code>)	reply, opt-out, bounce
2	2.1 scoped, low-risk explanation	+4	<code>target_account</code>	same
3	3.1 security and procurement readiness	+9	<code>target_account</code>	same
4	4.1 breakup and referral	+16	<code>target_account</code> then <code>paused</code> if silent	same
5	5.1 recap; 5.2 evidence and stakeholder follow-up	+1 and +5 after the discovery meeting	<code>discovery</code>	reply or next step booked
6	6.1 recap; 6.2 evidence answers and next step	+1 and +5 after the demo	<code>multi_stakeholder_demo</code>	same
7	7.1 invitation; 7.2 reminder	on request; +3	<code>multi_stakeholder_demo</code> to <code>outcome_workshop</code>	session booked or declined
8A	8A.1 scoping summary; 8A.2 follow-up	on session close; +5	<code>outcome_workshop</code>	decision or silence
8B	HOLD proposal delivery	--	<code>proposal</code>	not sendable
9A	9A.1 evidence status; 9A.2 prerequisites check	on request; +5	<code>technical_review</code> , <code>security_privacy_accessibility_review</code>	prerequisites recorded
9B	HOLD paper and billing	--	<code>procurement_legal</code>	not sendable
10A	10A.1 sponsor brief; 10A.2 nudge	after champion agrees; +5	<code>outcome_workshop</code> onward	sponsor call booked or declined
10B	HOLD sponsor sign-off	--	--	not sendable
11, 12, 13, 14	HOLD templates (and 11-DP, 12-DP, 14-DP variants)	--	<code>live</code> , <code>renewal</code> , <code>expansion</code>	not sendable
15	15.1, 15.2, 15.3 re-engagement	0, +7, +14	<code>paused</code> account	reply, opt-out, third touch sent

An account runs **one sequence at a time**. Sequences 1-4 are one cold run of four touches over about 16 business days; touches 2-4 are separate sections because each has its own purpose, subject lines and stop test. A reply from any contact at the account pauses every other

contact's run until the reply is handled (section C).

The shared procedures follow Sequence 15: **A** send-approval checklist, **B** personalization record, deliverability hygiene and volume cap, **C** reply handling and suppression, **D** metrics.

10. Financial model methodology

Where it lives VERIFIED

Piece	Path
Route	Operations console, Finance model tab: <code>app/src/screens/Console.tsx</code> (lazy-loaded)
UI	<code>app/src/finance/FinancialModel.tsx</code>
Engine	<code>app/src/finance/financialModelEngine.ts</code> (pure, deterministic, no clock, no storage)
Inputs, bounds, sources, validation	<code>app/src/finance/financialModelFields.ts</code>
Scenarios and sensitivity grids	<code>app/src/finance/financialModelScenarios.ts</code>
Exports	<code>app/src/finance/financialModelExports.ts</code>
Formatting	<code>app/src/finance/financialModelFormat.ts</code>
Types	<code>app/src/finance/financialModelTypes.ts</code>
Tests	<code>app/src/finance/financialModel.test.ts</code> , <code>app/src/finance/FinancialModel.test.tsx</code>

Authorization. The Console shows nothing without a `console:operate` grant at platform scope, read from `role_grants` by the database. The model component decides what to show someone already through that gate; it is not itself an authorization check. It reads no database, bank or ledger and writes nothing to browser storage (a test asserts this). Sample data only, per the brief's "local sample data first".

Inputs ASSUMPTION

About 100 numeric inputs in twelve groups. Each has a unit, bounds, a source tag and a note; the registry is `FIELDS` in `financialModelFields.ts` and is exported as `assumptions.csv`.

Source tag	Meaning	Example
<code>brief</code>	The founder's planning assumption	Platform \$18 per enrolled student, \$30,000 minimum
<code>repo</code>	A figure the repository already carries; needs confirmation	Cloud \$0.21 per active user per month, from <code>docs/finance/03-COST-MODEL.md</code>
<code>placeholder</code>	No figure exists; replace with an actual	Opening cash, pilot fee, insurance, accounting, the four obligations
<code>assumption</code>	A modelling choice with no external evidence	Every funnel rate, retention, expansion

Validation refuses non-numbers, NaN, infinity, out-of-range values, fractional month counts, and a pilot cohort outside 10 to 200. It warns, without refusing, on an implementation fee outside \$35,000 to \$150,000 and on a pilot length other than 6 months. The UI keeps the last valid result when an edit is refused.

Warnings VERIFIED

Warning	Fires when	Quiet when
Paid-pilot gate (critical)	Any pilot or direct annual deal is modelled	No outreach, so nothing is modelled
Capacity	Implementation demand hours exceed delivery heads x billable hours in any month	Capacity covers demand every month
Margin	Core gross margin in a model year is below the threshold (default 65%)	Every year at or above it
Runway (critical)	Cash is exhausted inside the threshold (default 12 months), or runway at the month-36 burn is below it	Cash lasts, or the threshold is met. The comparison is strict: runway equal to the threshold does not warn
AI	Cumulative AI cost exceeds AI overage revenue plus <code>aiIncludedRevenueShare</code> of platform, pilot and Premium revenue	AI is covered
Marketplace dependence	Marketplace is on; severity rises when the plan only breaks even with it	Marketplace off

Warning	Fires when	Quiet when
Annual minimum binds / pilot length differs from 26 weeks	Informational	

Every threshold is an input. Each warning has a test that raises it and one that leaves it quiet.

Exports VERIFIED

Monthly CSV and assumptions CSV (formula-injection guarded), JSON (schema `semester.gtm-financial-model.v1`, with basis and disclaimer inside the file), Markdown, a copy-as-prompt, and a board-ready Markdown summary with all twelve scenarios, decisions asked, placeholders to replace and review flags. Every export says **Forecast**.

What is not modelled DRAFT

- Annual Student Premium prepayment timing (blended into a monthly price).
- Pilot fee refunds, termination, credits, discounts, deal-desk floors.
- Sales tax, income tax, payroll tax detail, R&D credits, interest. REVIEW: tax
- Revenue recognition beyond straight-line; variable consideration. REVIEW: accounting
- Capital structure, dilution, a financing round beyond a single funding input.
- Seasonality of the academic calendar beyond the cycle and gate months.
- Churn within a pilot, and renewal pricing different from list.

11. Scenario summary

Scenario table ASSUMPTION (Forecast; regenerate from the Finance model tab)

Scenario	Month-36 ARR	Year-3 revenue	Year-3 gross margin	Lowest cash	Funding needed	Break-even	Warnings besides the pilot gate
Conservative	\$21.9k	\$83.5k	-142%	-\$1.21M	\$1.21M	none in 36 mo	margin, runway, no-conversions
Base	\$110k	\$332k	28%	-\$724k	\$724k	none in 36 mo	margin, runway
Ambitious	\$372k	\$948k	60%	-\$172k	\$172k	month 35	capacity, margin, runway
Downside / delayed sales	\$60k	\$199k	-10%	-\$1.03M	\$1.03M	none in 36 mo	capacity, margin, runway
Long procurement cycle	\$82.4k	\$305k	25%	-\$908k	\$908k	none in 36 mo	margin, runway
Pilot-heavy	\$154k	\$613k	56%	-\$261k	\$261k	none in 36 mo	capacity, margin, runway
Annual-contract-heavy	\$206k	\$386k	32%	-\$696k	\$696k	none in 36 mo	margin, runway
High AI usage	\$110k	\$400k	-3%	-\$885k	\$885k	none in 36 mo	margin, runway, ai
Low student adoption	\$107k	\$331k	31%	-\$709k	\$709k	none in 36 mo	margin, runway
High implementation cost	\$110k	\$332k	28%	-\$895k	\$895k	none in 36 mo	capacity, margin, runway
Low conversion	\$24.5k	\$174k	-21%	-\$1.01M	\$1.01M	none in 36 mo	margin, runway
High conversion	\$196k	\$397k	34%	-\$643k	\$643k	none in 36 mo	margin, runway

The opening balance is a \$100,000 placeholder, so every scenario's runway is short; **funding needed** is the figure that separates them.

What the numbers say DRAFT

- Volume, not price, is the constraint.** At 20 accounts contacted a month and a 1.3% contact-to-signed yield, Base signs about 0.26 pilots a month. No scenario except Ambitious (35 accounts a month with stronger stage rates and an earlier gate) covers a team. The brief's "narrow, measurable pilot" thesis needs enough qualified conversations, and the model prices that need.
- CAC is dominated by founder time and thin volume.** Counting half of one founder's cost as selling, with about two annual wins in three years, produces a CAC larger than one customer's first-year revenue. Counting zero founder time would be flattering, not correct.
- LTV is almost entirely a function of churn the company has never measured.** At 85% retention LTV is \$214k; at 95% it is \$643k. See the table below. Use ranges until retention data exists.
- Delivery capacity is tight.** One delivery head supplies 120 hours a month; one implementation needs 400 hours over two months (200 a month). One head therefore covers about 0.6 concurrent implementations, or roughly 0.3 new ones a month. Base signs 0.26. Any scenario that signs faster, or batches deals behind the pilot gate, trips the capacity warning and buys the overflow from contractors at \$90 an hour.
- AI pool versus cost needs a definition and a decision.** The pool is 2,400 requests per student per year. At the repository cost model's \$0.0146 per action that is \$35 per student per year against an \$18 platform price if every request were used; at the higher blended per-call figure noted in [FINANCIAL_MODEL_SPEC.md](#) it is more. The model's usage default (60 requests a month per active student, 875 of 2,500 students active) keeps cost low. The High AI scenario shows the margin turn negative and the AI warning fire. Overage at \$30 per 1,000 requests (\$0.03 each) is only about two times the \$0.0146 cost, and below the higher figure. REVIEW: accounting before any AI price is quoted.
- The paid-pilot gate is worth more than any rate.** Moving the gate from month 7 to 12 and slowing the cycle (Downside) cuts month-36 ARR from \$110k to \$60k and deepens funding need by about \$300k.

12. CAC, LTV, payback, runway and break-even definitions

H.2 Formulas (verbatim from the founder's brief) VERIFIED matches `kpi.ts` for CAC and CAC payback

- **CAC** = sales and marketing spend / new customers acquired
- **CAC payback months** = CAC / monthly gross profit per customer
- **LTV** = annual recurring revenue x gross margin / annual logo churn
- **MRR** = annual recurring revenue / 12 + recurring monthly student revenue
- **Break-even** = first month where cumulative gross profit covers cumulative operating expenses and required cash obligations

Delta vs repository: `kpi.ts` defines `customer_acquisition_cost` and `cac_payback_months` with the same shape; LTV, MRR and break-even are not defined in code or in `ANALYTICS-AND-METRICS-DICTIONARY.md`, which marks

ARR/MRR/bookings/billings/cash/revenue and CAC/LTV/gross margin/payback "FINANCE/ACCOUNTING DEFINITIONS AND SOURCES REQUIRED". These formulas are therefore ASSUMPTION definitions until Finance and the accountant approve a cost, customer, revenue and cohort policy.

Formulas VERIFIED (held by `financialModel.test.ts`, each worked by hand in the test)

Metric	Formula
CAC	Sales and marketing spend / new annual customers acquired, over 36 months. Sales and marketing = marketing + travel and events + sales payroll + <code>founderSalesShare</code> x founder payroll
CAC payback months	CAC / monthly gross profit per customer. Reported as not applicable, with a reason, when no customer is acquired or monthly gross profit is not positive
LTV	Annual recurring revenue x gross margin / annual logo churn. Undefined (not infinite) at zero churn
MRR	Annual recurring revenue / 12 + recurring monthly student revenue. ARR = MRR x 12
Break-even	First month where cumulative core gross profit covers cumulative operating expense and required cash obligations. Also reported: whether it is sustained to month 36, and the first month with a non-negative monthly operating result
Gross retention	Institution annual logo retention
Net revenue retention	Retention x (1 + expansion) as a formula, plus a figure measured from the model's own cohorts. They differ when the premium-support minimum binds, because that fee does not grow with scope
Runway	Months until ending cash first goes negative; plus a forward figure at the trailing three-month burn
Funding needed	The deepest the cash balance goes below zero
Revenue per employee	Year core revenue / year headcount

Gross margin in LTV is customer-level: recurring revenue less the variable cost to serve one institution (cloud, AI, support), not company gross margin, which at this scale carries fixed delivery payroll. Both are shown. REVIEW: accounting whether this is the right definition for any figure shown outside the company.

Marketplace and partner revenue (12% commission, off by default) is a separate line. It is excluded from core revenue, gross profit, break-even and every unit-economics figure, and a warning fires if the plan only breaks even with it.

One institution at Base prices ASSUMPTION

2,500 enrolled students in scope, 70% invited, 50% of those activate (875 active), 60 AI requests per active student per month.

Line	Per year	Working
Platform fee	\$45,000	$\max(\$30,000, \$18 \times 2,500)$
Premium support, expected	\$4,500	$30\% \text{ buy it } \times \max(\$15,000, 15\% \times \$45,000)$
ARR per customer	\$49,500	platform + expected support
AI overage	\$0	$875 \times 60 = 52,500$ requests a month, under the 2,400-a-student-year pool
Variable cost to serve	\$17,400	$875 \times (\$0.21 \text{ cloud} + 60 \times \$0.0146 \text{ AI}) + \$500 \text{ support, } \times 12$
Unit gross margin	64.8%	monthly gross profit \$2,675 on \$4,125

Results at Base ASSUMPTION (Forecast)

Metric	Value	Reading
CAC, per annual customer	\$157k	About two annual customers are won in 36 months, so a thin denominator carries a founder's selling cost
CAC per pilot signed	\$45k	
CAC payback	about 59 months	CAC / \$2,675 a month
LTV	\$214k	\$49,500 x 64.8% / 15% churn
LTV : CAC	1.4x	Under the 3x rule of thumb, which is a heuristic and not a target
Gross retention	85%	An input; no renewal has ever happened
Net revenue retention	93.5% by formula, 92.7% measured	The \$15,000 support minimum does not grow with scope, so measured trails formula
End-to-end pilot yield	37.8%	90% activate x 70% succeed x 60% convert

LTV sensitivity ASSUMPTION

LTV = \$49,500 ARR x gross margin / annual logo churn. Computed by hand; the model uses its measured 64.8% unit margin.

Annual logo churn	Margin 50%	Margin 65%	Margin 80%
5%	\$495,000	\$643,500	\$792,000
10%	\$247,500	\$321,750	\$396,000
15%	\$165,000	\$214,500	\$264,000
20%	\$123,750	\$160,875	\$198,000
30%	\$82,500	\$107,250	\$132,000

At the Base CAC of about \$157k, LTV : CAC clears 3x only in the bottom-left of this grid (churn 5%, margin above about 65%, or churn 10% at 80%). That is a statement about arithmetic, not a target.

13. Customer success and onboarding lifecycle

1.2 Timing: the user's 8-12 weeks versus the code's 26 weeks [DECISION OPEN]

Source	Rule
PILOT_WEEKS = 26, PILOT_DAYS = 182 in app/src/lib/gtm/pilot.ts ; D-134 (../../DECISION-LOG.md); ../../PAID-PILOT-FRAMEWORK.md	pilotReadiness returns duration unless end minus start is exactly 182 days. A 12-week plan fails the check. [VERIFIED: app/src/lib/gtm/pilot.test.ts "runs every pilot for exactly 26 weeks"]
Deal desk maxPilotMonths = 6 (app/src/lib/governance/deal-desk.ts)	Outer limit; both readings fit inside it. VERIFIED
Existing onboarding docs	30-60 day implementation window inside a 26-week pilot (../../commercial/PILOT-OFFER.md). VERIFIED
User's planning assumption	One academic term or 8-12 weeks. ASSUMPTION

Side-by-side, in relative phases. Both columns are ASSUMPTION ; neither is chosen here.

Phase	Reading A: user's planning assumption (8-12 week pilot)	Reading B: code rule (26-week pilot, onboarding inside it)
1 Sales handoff	Immediately after signature	Immediately after signature
2 Welcome + kickoff	Days 0-5	Days 0-5
3 Configuration / data	Weeks 1-2	Weeks 1-3 (days 6-21; existing playbook: days 6-15 paper/data, 16-30 configuration)
4 Training	Weeks 2-3	Weeks 3-5
5 Launch	Weeks 3-4	Weeks 6-8 (existing playbook: launch-council evidence days 46-60, then signed GO)
6 Adoption	Weeks 4-8 (or to week 10 in a 12-week term)	Weeks 8--24, including at least two weeks of hypercare before "learn"
7 Midpoint review	About week 5-6 (half of 8-12)	Week 13 (half of 26); pilotReadiness requires a midpointReviewDate
8 Results + conversion	Final 2 weeks (weeks 7-8 to 11-12)	Final 2 weeks (weeks 25-26); conversion date between end minus 14 days and end plus 30 days (conversion_outside_window rule)

Why this matters. Reading A cannot be entered into the readiness check as written, and "annual price agreed" (annualPriceAgreed) is also a readiness requirement, which conflicts with the HELD price quote. Options for the founder, to be recorded as D-<pull request number> by the lead: (1) keep 26 weeks, treat 8-12 weeks as an onboarding-plus-first-value sprint inside it; (2) change PILOT_WEEKS by a dated decision and update pilot.test.ts , the framework and the finance model together; (3) allow a shorter "design-partner sprint" outside pilotReadiness , labelled as such. Until decided, every template here shows relative phases, not dates.

2. Phase table (the lifecycle)

Phase | Target timing | Semester output | Customer outcome. Timing is relative to signature (Reading A / Reading B in 1.2).

#	Phase	Target timing ASSUMPTION	Semester output	Customer outcome
1	Sales handoff	Immediately after signature	Account plan, scope, risks, success criteria (accepted handoff packet)	Customer knows who owns what and what was and was not promised
2	Welcome + kickoff	Days 0-5	Welcome message, kickoff agenda, RACI, implementation plan	Named sponsor, champion and reviewers; agreed plan and dates
3	Configuration / data	A: weeks 1-2; B: weeks 1-3	Tenant setup (sandbox), data and integration validation	Approved data scope; verified readback of configuration
4	Training	A: weeks 2-3; B: weeks 3-5	Admin and champion training, guides, office hours	Trained admins and champions who can recover a flow unaided
5	Launch	A: weeks 3-4; B: weeks 6-8	Communications kit, onboarding, help center, monitoring	Cohort invited after a signed launch go

#	Phase	Target timing ASSUMPTION	Semester output	Customer outcome
6	Adoption	A: weeks 4-8; B: weeks 8-24	Usage dashboard (aggregate), nudges, support triage	Weekly evidence of first win and workflow completion
7	Midpoint review	A: ~week 5-6; B: week 13	KPI report, risk plan, executive update	Sponsor decision: continue, correct, pause or stop
8	Results + conversion	Final 2 weeks	Value report, annual proposal (HELD), roadmap	Signed decision: convert, expand, pause or stop

5. Customer RACI template DRAFT

R = does the work, A = accountable (one per row), C = consulted, I = informed. Roles from COMMITTEE_ROLES [VERIFIED: `app/src/lib/gtm/pilot.ts`]. Semester names: Harrison Rubin (interim) holds every Semester seat; security owner, privacy owner, counsel unassigned. Customer names are [PLACEHOLDER].

Work item	Exec sponsor	Operational owner / champion	CIO / IT	CISO / privacy	Accessibility	Registrar / data governance	Procurement / legal	Semester implementation lead	Semester CS	Semester support
Scope, exclusions, change control	A	R	C	C	I	C	C	R	C	I
Data scope and consent	I	C	C	A	I	R	C	R	I	I
Tenant, roles, SSO or manual roster	I	C	A	C	I	C	I	R	I	I
Integration validation (read-only first)	I	I	A	C	I	R	I	R	I	I
Accessibility UAT	I	C	C	I	A	I	I	R	C	I
Training delivery	I	A	C	I	C	I	I	R	R	C
Launch decision	A	R	C	C	C	C	I	R	R	C
Student communications	C	A	I	C	C	I	I	C	R	I
Support routing and escalation	I	C	C	C	C	I	I	C	C	A
Weekly metrics and review	I	A	I	C	I	C	I	C	R	C
Midpoint and final decision	A	R	C	C	C	C	C	C	R	I
Offboarding and data disposition	A	R	R	A	I	R	C	R	R	C

Row rule: where two A's appear (data and offboarding), they mean joint acceptance by customer and vendor, as in the existing RACI (`../../market-readiness/PILOT-IMPLEMENTATION-PLAYBOOK.md`). Each named person needs a named backup; "unassigned" is a launch blocker for A rows.

6. Sales-to-CS handoff checklist DRAFT

The 12 items in `../../commercial/STAGE-COLLATERAL-AND-HANDOFF.md` are the controlling list. This adds CS-specific confirmation (delta only):

#	Item	Done
1	All 12 existing handoff items filled; none blank	☐
2	Account plan: objectives in the champion's words, success criteria (3-5 measures), owner per measure	☐
3	Risk register v1: top five risks, each with owner, trigger, response	☐
4	Gate statement copied into the plan: what is live now, what is HELD	☐
5	List of promises made in the sale, each mapped to a CLM id or flagged outside the register	☐
6	Support route and hours the customer was told; reconciled with the staffed-support position (section 9)	☐

#	Item	Done
7	Customer contacts for the 10 committee roles, each with backup	[]
8	Reference and publicity status: none unless a signed permission exists (CLM-013)	[]
9	Pricing status: price agreed in the signed order only; no price in any customer message until approved (CLM-015)	[]
10	Decision dates: midpoint, conversion, offboarding (all inside <code>pilotReadiness</code> bounds)	[]

9. Support workflow and severity model DRAFT

Staffed support is NOT evidenced. GO-NO-GO priority 6 ("staffed support, monitoring and incident coverage": queues, hours, routing, rota, acknowledgement and escalation drills) is open; no channel, hours, trained backup or measured response exists. [VERIFIED: `../../../../GO-NO-GO-DECISION.md` priority 6; `../../../../commercial/SUPPORT-OPERATIONS.md` Evidence state] This document invents no staffing, hours or response times.

Workflow: follow the 7-step operating loop in `../../../../commercial/SUPPORT-OPERATIONS.md`. Severity: the canonical P0-P3 matrix and harm modifiers in section 1.5 of `../../../../SUPPORT-AND-TRUST-SAFETY-OPERATING-MODEL.md`; these are internal classifications, not promised clocks. Hypercare: `../../../../institutional-implementation/HYPERCARE-AND-HANDOFF.md`. Incident path: `../../../../trust/INCIDENT-RESPONSE-PLAN.md`. Pilot runbook: `../../../../market-readiness/PILOT-SUPPORT-RUNBOOK.md`.

Pilot overlay (delta): a P0 or P1 pauses the affected scope and blocks convert/expand (`pilotVerdict`); weekly support report is aggregate with cells under 10 suppressed; any support promise made to a customer must match published, tested hours or be removed from the plan.

G.2 Health score: two candidate models, one canonical ASSUMPTION REVIEW: privacy

Dimension	Founder's planning weights	CUSTOMER-HEALTH-SCORE .md (controlled, proposed)
Admin engagement	15	- (inside sponsor/champion)
User activation	20	- (inside meaningful adoption)
First meaningful action	15	15 (meaningful adoption / first win)
Core workflow completion	20	- (inside outcome trajectory / adoption)
Weekly active use	10	- (inside meaningful adoption)
Support sentiment	5	10 (support burden/resolution)
Executive engagement	5	10 (sponsor/champion engagement)
Outcome trend	10	25 (agreed outcome trajectory)
Implementation / readiness	-	20
Reliability / recovery	-	15
Trust / customer gates	-	5
Total	100	100

Canonical: `CUSTOMER-HEALTH-SCORE.md`. Reasons: it is a controlled repository document with human-review rules, overrides (a P0/P1 security, privacy, accessibility, safety, legal/rights, tenant-isolation or integrity issue overrides any score) and an explicit finding that the existing nightly `compute_account_health()` is **not** an implementation of it and must be treated as unavailable/unreviewed; it also forbids scoring individuals and inferring hidden intent. The founder's weights are kept as a **planning alternative** for a shadow comparison once any customer data exists. Gaps in the founder's model to resolve before use: no reliability or implementation dimension (a P0 can hide inside a high score); "support sentiment" must be a staff-recorded categorical value, never inferred from message content; "admin engagement" must be a factual action record, not subjective. Neither model produces a score today; show "unavailable" when evidence is absent, never neutral. No student is ever scored.

14. Cloud security and compliance plan

Gate (what may be done now versus held)

Activity	Now (GO / GREEN non-activation)	HELD until named gate
Discovery, synthetic demos, evidence exchange, conditional scoping	Yes. Use synthetic data only	n/a
Sending this plan or the register to a prospect	No (internal)	Controlled trust-room packet after review
Any live customer data, tenant activation, production integration	No	Blockers 1-8 in GO-NO-GO (section 7)
Price quote, order form, payment	No	Paid pilot gate (NO-GO / RED)

2. Governance (domain A)

Item	Owner	Status	Evidence	Next action	Register
Security owner	Harrison Rubin (interim)	Partially evidenced	OWNER-AND-ACCOUNTABILITY-MATRIX.md	Name a backup (TR-12)	CER-A01
Privacy owner	Harrison Rubin (interim)	Partially evidenced	docs/privacy-operations/README.md	Counsel intake; backup	CER-A02
Risk register	Harrison Rubin (interim)	Partially evidenced	docs/trust/RISK-TREATMENT-PLAN.md	Adopt appetite; first review minutes	CER-A04
Policy review cadence	Harrison Rubin (interim)	Partially evidenced	SEMESTER-OPERATING-SYSTEM.md	Quarterly calendar	CER-A05
Evidence register	Harrison Rubin (interim)	Verified-repository (index)	docs/trust/EVIDENCE-REGISTER.md	Produce artifacts	CER-A06
Security metrics	Harrison Rubin (interim)	Planned	app/src/lib/governance/error-budgets.ts	Section 4	CER-A07
Executive escalation	Harrison Rubin (interim)	Partially evidenced	docs/integrated-trust/INCIDENT-RESPONSE.md	Section 5	CER-A08

3. Domains B-F (summary; detail lives in the register)

Domain	Where it stands	Biggest gaps	Canonical docs	Registers
B Data governance	Schema inventory generated; every table has a retention answer held by test; export/erase map is catalogue-derived; subprocessor register held to CSP by test	No signed provider terms; vendors unassessed; no production reconciliation; operator side of rights requests absent; device-held export gap	DATA_INVENTORY_TEMPLATE.md, DATA_RETENTION_DELETION_PLAN.md, VENDOR_RISK_REGISTER.md	CER-B01..B19
C Identity and access	Capability-based least privilege with audited grants; console step-up; SSO/SCIM built, enabled for nobody	No MFA evidence for provider consoles; no student MFA; no access review; break-glass not consumed	docs/trust/IDENTITY-AND-ACCESS-MANAGEMENT-STANDARD.md	CER-C01..C14
D Application and cloud	CI gates, secret scan, RLS and definer sweeps, headers specified, logical restore rehearsed	No independent test; DAST static preview only; headers not served by current host; provider restore never done; no alerting	docs/trust/SECURE-DEVELOPMENT-LIFECYCLE.md, docs/trust/BACKUP-RESTORE-AND-ROLLBACK-RUNBOOK.md	CER-D01..D26
E Incident response	Plan, runbook, message composer, status feed, one founder document tabletop	No second person, alert route, send path, counsel, target exercise	INCIDENT_RESPONSE_PLAN.md	CER-E01..E12
F Procurement	RFP library test-held; HECVAT readiness register; trust-room mechanism	No HECVAT completed; no DPA; no ACR; no pentest; no named customer	HECVAT_ROADMAP.md, SECURITY_QUESTIONNAIRE_LIBRARY.md, TRUST_CENTER_INVENTORY.md	CER-F01..F15

4. Security metrics list DRAFT

No metric below has a measured value today (TR-27: no objective has a measured value). Targets are ASSUMPTION proposals for the founder to accept; none may appear in customer material.

Metric	Definition	Source	Cadence	Current	Proposed target ASSUMPTION
Open critical/high findings	Confirmed findings past their SECURITY.md clock	findings register docs/security/FINDING S-REGISTER.md	Monthly	Not measured	0 past clock
Time to fix by severity	Confirmation to fix, per severity	same	Monthly	None held against a real finding	Within SECURITY.md days (2/14/60/180, internal targets)
Dependency advisories open (high+)	npm audit high or above on production graph	CI ci.yml	Per release	0 at 2026-10-02 audit (point in time)	0
Secret-scan findings	Gitleaks leaks on tree/diff	CI	Per release	0 at 2026-10-02 scan (point in time)	0
Privileged accounts with MFA evidence	Consoles with filed enforcement proof / consoles in use	register CER-C01	Monthly	0 evidenced	100%
Access review completion	Reviews completed on schedule	CER-C08	Quarterly	None	100%
Restore test age	Days since last timed provider restore	CER-D20	Quarterly	Never (logical rehearsal only)	<= 90 days
Measured RTO/RPO	From a timed restore	CER-D20	Per exercise	None	Measured, then decided
Alert acknowledgement time	Alert to first human acknowledgement	route from TR-07	Monthly	No route	Decide after first measurement
Incident exercises held	TT-nn entries filed vs calendar	docs/integrated-trust/TABLETOP-CALENDAR.md	Quarterly	1 document walkthrough	Calendar met
Rights requests answered inside agreed time	Requests closed vs due date	data_subject_request	Monthly	No operator side	After counsel sets a clock
Vendors reviewed in date	High/Medium vendors with filed review / total	VENDOR_RISK_REGISTER	Quarterly	0 reviewed	100% before real data
Evidence freshness	Register rows with artifact inside cadence	EVIDENCE-REGISTER	Monthly	Nothing reads freshness	Computed
Policy review currency	Policies reviewed inside cadence	CER-A05	Quarterly	Not measured	100%

5. Executive escalation path DRAFT

Interim reality: one person holds every seat. The path below is what a second person must be able to follow; until one exists it is a plan, not a capability (TR-12).

Step	Trigger	Who decides	Interim holder	Notes
1 Detect and triage	Alert, report, customer message	Incident commander	Harrison Rubin	Suspected cross-tenant exposure is P0 until disproven
2 Executive decision	P0/P1, any pause of launch, any customer-visible commitment	Founder	Harrison Rubin	Single holder; a second reader of the closing summary is required by INCIDENT-RESPONSE.md, so the summary waits a day
3 Counsel	Notification duty, contract term, regulator or law-enforcement contact, statement about cause	Qualified counsel	unassigned REVIEW: counsel	Do not decide notification yourself
4 Customer authority	Any named institution affected	Institution sponsor/IT/privacy contact	Not yet named	Contacts per customer, none exist
5 Provider escalation	Provider-side cause	Provider support route	Harrison Rubin	Provider terms/contacts per vendor row

7. Launch gate list

Restated from [GO-NO-GO-DECISION.md](#); a gate is open only on the evidence that document names.

Gate	Required before	Evidence (to file under docs/evidence/)	Register rows
G1 Authorized published candidate, hosted CI green	any activation	Immutable SHA and run links	CER-D01, D10
G2 Independent security assessment and clean DAST rescan	paid/broad	Reports with no open launch-blocking finding	CER-D06, D09
G3 Qualified accessibility review	individual/paid/broad	Dated report and approved ACR position	CER-F07, F08
G4 Counsel-approved public policies and paper	individual/paid/broad	Versioned approvals; executed DPA	CER-F04, F13
G5 Entity, signing, price, tax, payment, insurance authority	paid/broad	Authority matrix, advice, coverage	CER-A12
G6 Staffed support, monitoring and incident coverage	any supported launch	Rota with backup; alert drill	CER-A13, D18, E10
G7 Recovery, rollback, rights and offboarding operated on the target	any target activation	Dated records with witnesses	CER-D20, D23, B06, B07
G8 Named customer scope and acceptance	institutional	Signed approvals, UAT, two-tenant acceptance	CER-F15

P0 gaps blocking a paid institutional pilot

Derived from the ten blocking items in [GO-NO-GO-DECISION.md](#) (paid institutional pilot = NO-GO / RED; priorities 1-9 apply; 10 applies to broad enterprise only). Gate flips only on the evidence named there, never on this table.

GO-NO-GO blocker	Register rows	What is missing (as of 2026-10-05)	Category
1. Authorized published candidate and current hosted release matrix	CER-D01, CER-D10	Immutable SHA, green hosted CI links and retained logs for an authorized candidate	technical
2. HawkScan and independent security assessment	CER-D06, CER-D09, CER-D05	Authorized target runtime; DAST clean rescan; independent report with no open launch-blocking finding	security
3. Qualified accessibility review	CER-F07, CER-F08	Dated manual AT/keyboard/zoom report; approved ACR or status position	accessibility
4. Public and institutional legal authority	CER-F04, CER-F13, CER-B07, CER-B16, CER-E05	Counsel-reviewed public policies, pilot paper, DPA and exhibits	legal
5. Entity, signing, price, tax, payment and insurance authority	CER-A12 (plus finance rows outside this register)	Insurance decision; signed authority matrix	commercial
6. Staffed support, monitoring and incident coverage	CER-A13, CER-D17, CER-D18, CER-E03, CER-E10	Rota with named backup; alert-to-case route; acknowledgement drill	operations
7. Recovery, rollback, rights and offboarding operation	CER-D19, CER-D20, CER-D23, CER-B06, CER-B07, CER-B08, CER-E07	Provider-backup restore with named witnesses; rights, export, deletion, revocation and offboarding records on an authorized target	reliability/privacy/security
8. Named customer scope and acceptance	CER-F15, CER-B13, CER-C12	Signed approvals, UAT, two-account/two-tenant acceptance	customer
9. Baseline, outcome and reference authority	outside this register (see GTM documents)	Frozen baselines and claim-specific permission	product/commercial

Not blocking a paid pilot by GO-NO-GO but P0 before an invitation-only beta carries real student data per [REMEDATION-SEQUENCE.md](#): TR-04 (reconcile registers), TR-05 (blocking dependency audit), TR-06 (severity scale), TR-07 (alerts to a second person), TR-08 (erasure/export through the real function), TR-09 (key inventory), TR-10 (provider restore).

15. Trust Center and HECVAT roadmap

2. Phases

Durations are **ASSUMPTION** estimates for one founder working part time; they start when the named trigger occurs and are not promises.

P h a s e	Name	Trigger	Work	Exit criterion	Owner	Effort ASSUMPTION
0	Housing	Now	Reconcile contradictions (TR-04); name backup owner (TR-12); decide severity scale (TR-06); update stale rows (section 4)	Registers agree; open decisions recorded	Harrison Rubin	3-5 person-days
1	Lite readiness	After phase 0	Re-read each register row against its cited file; fill "Company to supply" rows (entity facts, contact address); file owner attestations as exports where possible (MFA proof)	A reviewed internal Lite answer set; every Yes rests on a READY row with a cited file	Harrison Rubin	5-8 person-days
2	Lite for a named buyer	A buyer sends a workbook	Map answers to the buyer's question ids; scope to the buyer's use; counsel and security spot-check REVIEW: counsel REVIEW: security ; share via trust room	Workbook returned with each answer carrying evidence, status and date; no completion or approval wording	Harrison Rubin + reviewers (unassigned)	3-5 person-days per workbook
3	Evidence close-out	Independent items scheduled	Independent security assessment (TR-16); authenticated DAST (CER-D06); restore of a real provider backup (TR-10); tabletop with a second person (TR-30); alert route (TR-07); access review (CER-C08); vendor reviews (CER-B12); DPA with counsel (TR-22); qualified accessibility review (TR-25)	Each artifact filed under docs/evidence/ and its register row raised in the same commit	Harrison Rubin + external parties	Calendar-bound by third parties; internal effort 15-25 person-days spread over months
4	Full HECVAT	Phase 3 mostly closed, or a buyer insists on Full earlier	Complete Full workbook from the register and the evidence matrix; internal security/privacy/legal review; remediate critical gaps found	Full answer set where No/Partial remain visible with plans; no claim beyond evidence	Harrison Rubin + reviewers	15-25 person-days
5	Maintain	After first submission	Quarterly re-read of the register vs code; annual refresh per buyer	Evidence freshness checked; changes logged	Harrison Rubin	1-2 person-days per quarter

Dependencies on independent assessment are marked in section 3 with **IA**.

4. Known cases where a draft "Yes" must not be reused as written **DRAFT**

These are rows in **docs/market-readiness/HECVAT_DRAFT_RESPONSE.md** whose "Yes" rests on something other than a **READY** register row or on wording stronger than the evidence ceiling. The draft is test-held; this review does not edit it. Fix at the source in a reviewed change **REVIEW: security**.

Draft row	Draft answer	Concern	Safer scoped wording
AAAI-04 MFA on staff/admin accounts	Yes (owner attestation 2026-09-28)	Attestation only; no configuration export; trust register row SEC-IAM-002 is owed	"The owner attests MFA is enabled on the administrative accounts; configuration exports are being collected." Status Partial
DATA-03 Encryption in transit	Yes ("All traffic is HTTPS")	Security headers are specified for hosts that do not serve production (TC-SEC-14); no TLS configuration filed	"Hosted surfaces are served over HTTPS; configuration evidence is being collected." Status Partial
INCD-02 Notification after exposure	Yes (affected accounts emailed within 72 hours)	SECURITY.md labels 72 hours a target pending counsel, not a commitment; no notice deadline approved; LEGAL-REVIEW-QUEUE L1	"Semester's incident plan sets an internal target of notifying affected accounts; contractual notice terms are subject to counsel review." Status Partial REVIEW: counsel

Draft row	Draft answer	Concern	Safer scoped wording
AIML-04 AI-specific incident response	No ("Not yet written")	docs/trust/AI-INCIDENT-AND-KILL-SWITCH-RUNBOOK.md exists (controlled draft, limited drill evidence); register row AI-3 still NOT_STARTED	"A controlled draft AI incident and kill-switch runbook exists; one limited drill is filed." Status Partial after the register row is updated
HOST-01 / DATA-06	Partial / Yes	Region read from the project on 2026-09-28; other vendors' regions "to confirm"	Name Supabase region only as read; others "being confirmed"
APPL-03 CSP Yes	Yes	Honest as written (host cannot set headers); keep the caveat	Keep verbatim

1. Inventory of content items

Visibility: **Public** = reachable without an account today; **Request-gated** = only through the NDA/trust-room flow; **Internal** = repository only; **Student-only** = signed-in student screen. Approval state quotes PUBLIC-CLAIMS-APPROVAL-REGISTER.md : no named approver is recorded for any customer-facing wording.

#	Item	Where	Visibility	Owner	Approval state	Gaps / notes	Label
1	Privacy disclosure shown in the app	app/src/lib/privacy.ts, app/src/screens/Privacy.tsx; held true by app/src/lib/privacy.test.ts	Public (in the app)	Harison Rubin (internim)	Test-held; not counsel-reviewed	Public policies await counsel (GO-NO-GO blocker 4)	VERIFIED app/src/lib/privacy.test.ts REVIEW: counsel
2	Company-site trust pages: Security, Privacy, Accessibility, Legal, Data and AI transparency, Launch readiness	app/src/site/pages.tsx, app/src/site/more.tsx, app/src/site/benchmark.tsx (routes /security/, /privacy/, /accessibility/, /legal/, /trust/data-and-ai-transparency/, /launch-readiness/)	Public	Harison Rubin (internim)	Not registered as approved wording	Finding T-1: the site states "a confirmed exposure of your data brings notice within 72 hours" (app/src/site/pages.tsx contact routes and security section) while SECURITY.md calls 72 hours a target pending counsel and not a commitment, and LEGAL-REVIEW-QUEUE.md item L1 queues the 72-hour commitment for counsel. Review wording before any outreach points to it	VERIFIED REVIEW: counsel
3	Security contact and policy	app/public/.well-known/security.txt; SECURITY.md	Public	Harison Rubin (internim)	Published; safe-harbour wording not written (needs counsel)	Contact is a personal mailbox; Expires 2027-03-31 per CONTROL-FACTS.md (as generated at revision 5eba494)	VERIFIED REVIEW: counsel
4	Status page and incident feed	app/public/status.html, app/public/status-incidents.json, app/public/status-feed.xml; app/src/lib/status-page.test.ts	Public	Harison Rubin (internim)	n/a (facts feed)	Feed lists no incidents (updated 2026-09-30); no subscribers; posting needs a merge and deploy (TR-39); not an uptime statement	VERIFIED

#	Item	Where	Visibility	Owner	Approval state	Gaps / notes	Label
5	Subprocess or register	docs/SUBPROCESSORS.md from app/src/lib/trust/subprocessors.ts	NDA before counsel review; public once reviewed (per SECURITY-ACCESSIBILITY-READINESS)	Harison Rubin (interim)	Draft; counsel has not reviewed; regions/terms not on file	See VENDOR_RISK_REGISTER.md	VERIFIED app/src/lib/trust/subprocessors.test.ts REVIEW: counsel

2 1	Institution trust dashboard (derived rows)	<code>app/src/lib/trustdashboard.ts</code>	Institution view; nothing live	Harrison Rubin (interim)	Derived from code	No institution connected; rows say so	VERIFIED <code>app/src/lib/trustdashboard.test.ts</code>

#	Item	Where	Visibility	Owner	Approval state	Gaps / notes	Label
22	Procurement room (reviewer page and server)	app/src/screens/TrustRoom.tsx, supabase/functions/trust-room/index.ts	Request-gated by link token	Harrison Rubin (intern)	Mechanism built; no packet content approved	Trust seat vacant; no document published to it	VERIFIED supabase/trust-room.check.sql

Never shared at any tier (from SECURITY-ACCESSIBILITY-READINESS.md): secrets, keys, production data, any student's records, other institutions' configurations or contacts, or anything under `supabase/` that names a real account.

4. Gaps and next actions

Gap	Action	Owner	Label
T-1 public 72-hour wording vs SECURITY.md target	Counsel decides the commitment; align site and SECURITY.md in one change	Harrison Rubin + counsel	REVIEW: counsel
Trust seat vacant; no approved packet	Name owner; approve packet list	Harrison Rubin	DRAFT
No dry run of the room	Synthetic reviewer, synthetic packet	Harrison Rubin	DRAFT
Accessibility statement and ACR absent	Qualified review first (TR-25)	Harrison Rubin	REVIEW: accessibility
Subprocessor list unpublished	Counsel review then publish (TR-22)	Harrison Rubin	REVIEW: counsel

16. 90-day plan

P0 list: blockers for a paid institutional pilot VERIFIED from `GO-NO-GO-DECISION.md` priorities 1-9

All nine are **open: no evidence filed** at the evidence date. Priority 10 (repeatability) blocks broad enterprise sale only.

ID	Go/no-go priority	Blocker	Owner / authority	Remediation	Required evidence	Plan rows that depend on it
B 1	1	Authorized published candidate and current hosted release matrix	HR / engineering; hosted CI authority	publish/freeze candidate; rerun CI, PostgreSQL 17, account sync, target checks	immutable SHA, green run links, retained logs	D2-01, D3-02
B 2	2	HawkScan and independent security assessment	HR coordinates; independent assessor (unassigned)	configure target; scan, triage, fix, clean rescan; independent assessment	DAST reports and independent report with no open launch-blocking finding	D2-02, D2-06
B 3	3	Qualified accessibility review	qualified assessor (unassigned) + HR + counsel	manual AT, keyboard, zoom review; remediate; retest	dated report and approved ACR/public position	D2-03
B 4	4	Public and institutional legal authority	HR + qualified counsel (unassigned) + customer counsel	resolve company facts; review public policies, pilot paper, DPA, exhibits	versioned approvals; executed applicable paper	D2-04, D3-03
B 5	5	Entity, signing, price, tax/accounting, payment and insurance authority	HR + CPA/tax adviser + broker (all unassigned) + counsel	confirm facts; approve economics; implement controls	signed authority matrix, written advice, coverage/payment evidence	D1-05, D2-05
B 6	6	Staffed support, monitoring and incident coverage	HR primary; backups required (unassigned)	establish queues, hours, routing, rota; acknowledgement/escalation drills	signed owner matrix; alert/support exercise record	D2-07, D2-08
B 7	7	Recovery, rollback, rights and offboarding operation	engineering + security + privacy + support	execute on authorized target with named witnesses	dated restore, rollback, incident, export, deletion, revocation, offboarding records	D2-09
B 8	8	Named customer scope and acceptance	customer sponsor, IT, privacy, security, accessibility, procurement/counsel	approve cohort, data/integration map, roles, limitations, UAT	signed approvals, UAT, responsibility matrix	D3-01, D3-02
B 9	9	Baseline, outcome and reference authority	product/success + customer sponsor + counsel	freeze measures and guardrails; run pilot; reconcile; obtain permission	signed baseline, complete denominators, decision record, claim-specific permission	D3-04, D3-05

A paid pilot is reconsidered only after a bounded design-partner engagement has an **approved activation record and a measured closeout** (`GO-NO-GO-DECISION.md`, Checkpoint F table). Passing the executable profile `paid-institutional-manual-pilot` in `app/src/lib/governance/release-profiles.ts` authorizes only the exact named target.

Days 1-30: Become sellable DRAFT

Exit decision G30: continue only if candidate identity, owner coverage, external-review scopes and legal/company-fact paths are credible; otherwise stay in preparation and do not manufacture an activation date.

ID	Item	Pri	Owner	Dependency	Acceptance criteria	Evidence of done	Risk	Review
D 1-01	Freeze the launch wedge "Semester Registration Readiness Pilot": scope, exclusions, buyers, metrics, boundary statement	P 0	HR	none	one-page scope names workflow, cohort rule (10-200), exclusions, 8 primary metrics, "beside existing systems" wording tied to CLM-004/006	scope file linked from the playbook; no unsupported claim (claims check)	scope creep toward replacement	W, G30
D 1-02	Decide pilot length (26 weeks code vs 8-12 weeks assumption)	P 0	HR	none	decision recorded as <code>docs/decisions/D-<PR number>.md</code> ; if 8-12 weeks, <code>PILOT_WEEKS</code> change scoped separately	decision file; proposals and MAP use the decided value	proposals stall on duration problem	W

ID	Item	Pri	Owner	Dependency	Acceptance criteria	Evidence of done	Risk	Review
D 1-03	Finalize ICP and account-scoring inputs; score >= 10 real accounts	P 0	HR	warm-path or observed-need evidence	each score cites dated observations; Tier A/B/C assigned; no disqualifier missed; no institution named externally	gtm_accounts rows with target_score ; scoring note	fabricated warm path; scoring from prestige	W
D 1-04	Build 100-account list (template from docs/business/sales/CRM_PIPELINE_DEFINITION.md)	P 1	HR	D1-03	list has role and work address only; owner, source, tier per row; dedupe done	gtm_accounts export (no personal data beyond role)	privacy: personal data in CRM	W
D 1-05	Record pricing assumptions (not prices) and the open-decision table; resolve student-price and institutional-unit decisions or leave placeholders	P 1	HR + finance reviewer (unassigned)	B5	decision table in the playbook is current; quotes use [PRICE TO BE CONFIRMED] ; CLM-015 unchanged	open-decision table; D- if decided	quoting an unapproved number	M
D 1-06	Hook GTM drivers to the Finance model (no numbers in GTM docs)	P 1	HR	lead's finance deliverables	each GTM KPI input names its Finance driver; Base scenario figures read from the model tab	cross-reference table in KPI tree	forked numbers	M
D 1-07	Claims map: every sentence on home, institutions, pricing, trust pages maps to a CLM row; name a claims approver or keep "not approved"	P 0	HR (claims owner interim)	none	zero pages with unmapped claims; takedown owner named	claims table; docs/CLAIM-WITHDRAWAL-RUNBOOK.md log	publishing before approval	W
D 1-08	Synthetic deck and demo (executive, operational, technical) with captions	P 0	HR	D1-01	demo runs on synthetic data only; states available/pilot-dependent/planned; recorded and captioned	recording + transcript; commercial/DEMO-SCRIPT-*.md run log	accidental real data; overclaim	W
D 1-09	Pilot offer one-pager and conditional scope (non-binding)	P 1	HR	D1-01, D1-02	states gate, exclusions, placeholders; marked non-binding draft pending counsel	file in docs/business/sales/	reads as an offer	G3 0
D 1-10	Contract and trust inventory: list every paper and trust artifact, owner, status, review date	P 0	HR	none	each of DPA, pilot agreement, security addendum, accessibility exhibit, subprocessor list, HECVAT evidence listed with current status	inventory table; docs/trust/DOCUMENT-MAP.md cross-checked	stale artifacts	G3 0
D 1-11	Name security, privacy and accessibility owners and backups (or record "interim HR") and commission scopes	P 0	HR	B2, B3	each seat has a name or an explicit interim record; assessor scopes requested	owner matrix update (OWNER-AND-ACCOUNTABILITY-MATRIX.md)	seats stay vacant	W
D 1-12	Engage counsel, CPA/tax adviser, broker (engagement letters or recorded decision not to)	P 0	HR	funds	at least counsel engaged; the others have a dated decision	engagement record	cost; delay	W
D 1-13	Website conversion paths: audience routing, invite request, discovery contact, pilot page, Trust Center "Not yet in place"	P 1	HR	D1-07	each path reaches a real route (social.ts funnels test); no price, logo, outcome; accessible	page list; funnel test green	claims drift	W
D 1-14	CRM readiness: stages configured with exact ids and exit checks	P 1	HR	D1-04	salesMoveProblems mirrors checklist; fields from ACCOUNT-SCORING-AND-FORECAST.md added	schema/config note; one test move	stage skipping	W
D 1-15	Content calendar weeks 1-4 and consent text drafted for counsel	P 2	HR	D1-07	assets have register row, captions, alt text, owner, expiry	content register rows	unreviewed publish	W
D 1-16	KPI baseline definitions frozen (no targets)	P 1	HR	none	every KPI in SEMESTER_GTM_KPI_TREE.md has numerator, denominator, source	KPI tree reviewed	definitional drift	M

Days 31-60: Become pilot-ready DRAFT

Exit decision G60: a live design-partner activation remains NO-GO unless every applicable launch-checklist item has accepted evidence. A delayed pilot is preferable to an unevidenced one.

ID	Item	Pri	Owner	Dependency	Acceptance criteria	Evidence of done	Risk	Review
D2-01	Publish/freeze candidate; hosted CI, PostgreSQL 17, account sync	P0	HR / engineering	B1	immutable SHA and green run links retained	go/no-go priority 1 evidence	CI red	W
D2-02	HawkScan and independent security assessment scoped, scheduled, started	P0	HR + assessor	B2, D1-11	signed scope, independence, target, dates	scope document	assessor lead time	W
D2-03	Qualified accessibility review scoped and started	P0	HR + assessor	B3	scope covers exact pilot workflows with AT	scope + schedule	no assessor	W
D2-04	Pilot agreement through counsel: evaluation/pilot paper, DPA, security addendum, accessibility exhibit	P0	counsel (unassigned) + HR	B4, D1-12	counsel-reviewed versions filed; deviation matrix (CONTRACT - DEVIATION - APPROVAL - MATRIX.md) agreed	versioned counsel approvals	counsel delay; scope creep	W, G60
D2-05	Entity, signing authority, tax/payment, insurance facts and decisions	P0	HR + CPA + broker	B5, D1-12	written advice; authority matrix signed	filed advice	open facts	G60
D2-06	HECVAT Lite evidence plan: map each question to an evidence row or a stated gap	P0	HR (security owner interim)	B2; HECVAT - EVIDENCE - MATRIX.md	every question labelled implemented / pilot-scoped / planned / not applicable / customer responsibility / gap; no "compliant" answer	plan + matrix delta	answering from memory	W
D2-07	Onboarding, training and support workflow rehearsed on synthetic cohort	P0	HR / CS	B6	rehearsal record; first-day checklist; escalation path; known-limitations disclosure	rehearsal log (docs/pilot/)	no staffed backup	G60
D2-08	Named primary and backup for support, security, privacy, incident	P0	HR	B6	signed owner matrix; acknowledgement drill	drill record	backup unavailable	W
D2-09	Restore, rollback, export, deletion, revocation, offboarding rehearsals on target	P0	engineering + security + privacy	B7	dated records with witnesses	rehearsal records	no authorized target	G60
D2-10	Student ambassador kit (training, conduct, disclosure text for counsel)	P1	HR	counsel on disclosure	kit ready; not launched until counsel clears	kit + counsel note	peer pressure risk	M
D2-11	First webinar(s) on synthetic demo: registration readiness without surveillance; advisor prep	P1	HR	D1-08, D1-07	recorded, captioned; consent text on registration; no outcome claims	recording, attendee log (aggregate)	claims drift	W
D2-12	Outbound sequences (warm paths only), email nurture set live to opted-in contacts	P1	HR	D1-03, D1-07; docs/business/sales/sequences	messaging.ts consent and suppression pass; first touches logged against gtm_accounts	send audit log	cold-bulk temptation	W
D2-13	Pilot proposals issued non-binding to qualified accounts (target: those at proposal stage only)	P1	HR	D1-09, D1-02, D2-04 draft	each carries gate statement, placeholders, "non-binding draft pending counsel review"; stage moves per SALES_EXIT.proposal	proposal register	read as binding	W
D2-14	Trust room readiness: publish artifact versions with owners and review dates	P1	HR (trust officer interim)	D1-10	versions pinned to a commit; expiring links; every open logged	trust-room records	stale version	M
D2-15	Mutual Action Plan and pilot design-session run with first qualified account	P1	HR	account at outcome_workshop	session produces committee map, cohort rule, draft scorecard, dated conversion decision	session notes in gtm_decision_log	no willing account	W
D2-16	Content calendar weeks 5-8; claims register QA	P2	HR	D1-15	per-asset register rows	content register	none	W

ID	Item	Pri	Owner	Dependency	Acceptance criteria	Evidence of done	Risk	Review
D2-17	Weekly KPI snapshot started (actual vs forecast labelling)	P1	HR	D1-16	snapshot has labels "observed / estimated / assumption / unavailable"	weekly note	vanity metrics	W

Days 61-90: Become repeatable DRAFT

Exit decision G90: run or decline one bounded design-partner engagement. A signed or near-signed design-partner engagement is a **target** conditional on a willing prospect and the non-activation boundary; it is not a plan to sign paid paper.

ID	Item	Pri	Owner	Dependency	Acceptance criteria	Evidence of done	Risk	Review
D3-01	Signed or near-signed design-partner engagement for non-activation scope (discovery, synthetic demo, evidence exchange, written scoping); name a conditional activation path for one bounded cohort	P0	HR + customer sponsor	B8, D2-04, D2-15	counsel-reviewed paper (or explicit "near-signed" status with open items listed); no live data, no activation, no logo; sponsor and champion named	paper or status record; pilotReadiness run shows remaining problems	counterparty delay; mistaken for paid pilot	W, G90
D3-02	Activation GO/NO-GO for the exact configuration (only if all applicable gates are evidenced) else a dated NO-GO/deferral	P0	launch council (HR interim) + customer	B1, B8, D2-09	signed decision naming scope, revision, target, owners, expiry	signed decision	pressure to launch	G90
D3-03	Paid-pilot decision: update the go/no-go with evidence, price authority and capacity	P0	HR + counsel + CPA	B2-B5	updated GO-NO-GO-DECISION.md reissued if scope or evidence changed	reissued decision	assuming a flip	G90
D3-04	Measurement design for the first engagement: baseline source, definitions frozen, denominators, privacy floor $n \geq 10$	P0	HR	B9	signed baseline plan; no backfill	scorecard fields complete	no baseline	W
D3-05	Weekly pilot report, midpoint exec review and final value report templates exercised on synthetic data	P1	HR	docs/business/templates/	each template filled once with synthetic data; clearly labelled	filled samples	none	M
D3-06	Annual conversion process rehearsed (verdict -> pre-decision reconciliation -> paper)	P1	HR	PILOT-T0-ANNUAL-CONVERSION.md	decision date placement and notice dates modelled	process walkthrough	none	G90
D3-07	Case-study and reference process (permission-first); confirm none published	P1	HR	CLM-013	process documented; zero case studies, logos or quotes	process doc; claim log	premature use	M
D3-08	QBR/EBR and renewal cadence set before any contract exists	P2	HR	D3-06	calendar of reviews 120 days before term end	cadence doc	none	M
D3-09	KPI and board rhythm: first monthly pack and quarterly strategy/OKR session held	P1	HR	D2-17	pack with labels; OKRs with guardrails; no unset targets treated as targets	pack	none	M
D3-10	Expansion plan (adjacent cohorts, one condition each)	P2	HR	D3-01	plan states each expansion needs its own readiness check and launch-council go	plan	none	M
D3-11	Student validation cohort (invitation-only, unpaid) only if individual-validation gates accepted	P1	HR + product	individual-validation profile; B1, B6, B7	named cohort, capacity, support, stop criteria recorded	validation decision	broad promotion	G90
D3-12	Paid-media validation gates reviewed (no spend)	P2	HR	master E.9	gates P-1..P-7 status recorded; spend remains 0	gate table	premature spend	G90
D3-13	Content calendar weeks 9-12; spring syllabus-week prep	P2	HR	D2-16	register rows	content register	none	W

Weekly activity targets ASSUMPTION

Activity (leading, within founder capacity) targets only. They are **not** outcome forecasts, pipeline values or win rates. A week missing a target is a finding, not a failure to hide. Each target stops when the capacity cap of three active pursuits binds.

Wee ks	Warm-path outreach touches / week	Discovery calls held / week	Qualification scores completed / week	Synthetic demos / week	Evidence exchanges (trust room, questionnaire) active	Content assets published / week	Webinar s
1-4	5	0-1 (rehearse)	2	rehearsal	0	1-2 (use-case or LinkedIn)	none
5-8	8	2	2	1	up to 2	2	1 in the window
9-13	8	2	2	1	up to 3	2	1 in the window

17. KPI tree

Rules that apply to every KPI [VERIFIED structure] DRAFT

Actual vs forecast vs assumption labelling

Label	Meaning	Allowed source	Display rule
ACTUAL	observed in a named source, with as-of time, window, cohort, numerator, denominator, sample size	closed books, gtm_* tables, validated events, support system	may appear in a board or founder pack
FORECAST	a model output with scenario named	Finance model tab (name the scenario)	always shows scenario; never beside an actual without the label; never the go/no-go-blind Base scenario for a timing decision (see Finance 10-GO-NO-GO-GATES.md)
ASSUMPTION	target, planning input, price, rate or threshold	founder, recorded decision	shown as a target, never as a result
UNAVAILABLE	no valid source yet	n/a	show "unavailable"; distinct from zero, not applicable and suppressed

Rules: (1) never backfill an actual from a forecast; (2) a definition change is versioned, not silently applied; (3) cells below the privacy floor ($n < 10$, VERIFIED proposal in the dictionary and growth spec) are suppressed; (4) a rate with an empty denominator is unavailable; (5) a figure with no source is not shown; (6) UNKNOWN more than one quarter scores red ([03-okrs-planning-metrics.md](#)); (7) qualitative feedback is labelled self-reported and non-causal; (8) a target requires a recorded decision ([docs/decisions/D-<PR number>.md](#)); until then the target column reads "none until baseline" or an ASSUMPTION.

Vanity metric exclusions

Views, downloads, followers, impressions, scans, sign-ups-without-activation, logins, time in app, number of meetings held, seats provisioned, and traffic are **diagnostic only, never proof** of pilot value, product value or pipeline health. They may appear in a diagnostics panel labelled "leading / diagnostic". They may not appear in a customer report, a board pack headline, a forecast or a claim (CLM-014). Email opens are inflated by mail privacy protection; prefer clicks and conversions ([kpi.ts](#) caveat).

The tree DRAFT

ENGINE 1 NORTH STAR: ARR from annual agreements converted from completed pilots

ASSUMPTION: definition pending Finance

```
-- Revenue
|   |-- New ARR (conversions + new) <- pilot-to-annual conversion rate x pilots with decision due x
average annual contract value
|   |-- NRR (expansion - contraction - churn) <- expansion cohorts, logo retention
|   |-- Gross margin <- hosting, AI inference, support, implementation labour
|-- Pipeline
|   |-- qualified pipeline coverage (counts, unweighted) <- stage conversion x cycle time x accounts
entering each stage
|   |-- accounts scored/qualified <- warm-path outreach, discovery calls, demos, evidence exchanges
|-- Customer health (human-reviewed) <- outcome trajectory, implementation, adoption, reliability,
support, sponsor engagement, trust gates
|-- Delivery capacity <- active pilots vs cap, implementation hours, support load
|-- Security <- open P0/P1, evidence age, review cycle time, claims incidents
|-- Cash / runway <- cash balance, net burn, receivables
```

ENGINE 2 NORTH STAR: Weekly Prepared Action Rate (proposed)

```
-- Activation <- invited -> activated (consent + minimum setup)
|-- First meaningful action <- activated -> first win
|-- Product adoption <- weekly meaningful engagement, workflow completion
|-- Retention <- Day 7 / Day 30 meaningful return, week-4 retention
|-- Support <- contacts per activated user, resolution age
|-- Guardrails <- opt-out/deletion, notification disablement, accessibility blockers, P0/P1
(Student outcomes are cohort aggregates,  $n \geq 10$ , and become the evidence in the institution's renewal
decision.)
```

18. Operating cadence

Meeting cadence DRAFT

With one person holding every seat, run one combined weekly operating review and treat the separate rows as agenda blocks until seats are filled. The company's QBR agenda and OKR rules are in [03-okrs-planning-metrics.md](#); this table is the GTM layer. Time boxes are ASSUMPTION.

Meeting	Cadence / length	Owner	Agenda	Inputs	Outputs
Weekly revenue	weekly, 45 min	Founder (sales owner)	every commit and best-case opportunity against evidence; stale next actions; expired proposals; missing approvers; overdue decision-log items; new scores; capacity cap	gtm_accounts , gtm_decision_log , pipeline KPIs	updated stages, dated next actions, a one-line pipeline note; no forecast value
Weekly product / engineering	weekly, 30 min	Founder (product owner)	activation and first-win events (instrumentation status), friction, release candidate and CI, P0/P1, accessibility blockers	activation and adoption KPIs, CI, incident log	prioritized fixes, instrumentation decisions
Weekly customer success	weekly, 30 min (pilot only)	Customer success (founder interim)	frozen-denominator weekly pilot report, guardrails, support queue, open decisions, next owners	weekly pilot report, support KPIs	continue / correct / pause per pilot; weekly report sent to sponsor
Weekly growth	weekly, 45 min	Growth owner (founder interim)	D1-D4 dashboards, claims register QA, content calendar, consent and suppression, experiments (biweekly)	growth dashboards, content register	publish / hold decisions; claim corrections
Daily glance	daily, 10 min	Growth owner	complaints, accessibility, claims, incidents (D6)	D6	stop or escalate
Monthly finance	monthly, 60 min	Founder with accountant when engaged	cash, burn, runway, CAC, payback, margin, Base vs actual, assumption changes, hiring gates	books, Finance model tab, KPI revenue and cash tables	updated reforecast; labelled actual vs forecast; hiring gate decisions
Monthly security and risk	monthly, 60 min	Security owner (unassigned; HR interim)	evidence age and expiry, P0/P1, assessments, subprocessors, retention, claim expiry, rights requests	evidence register, incident log, claims log	renew, close or escalate; claim withdrawals
Quarterly strategy / OKR	quarterly, 90 min pre-seed	Founder with advisor	score OKRs; each motion GO / GO WITH CONDITIONS / PAUSE / NO-GO; scorecard exceptions; stop list; next-quarter OKRs and guardrails	quarterly pack	motion decisions as records; reissued go/no-go if material change

Required discipline: every meeting produces a record; a quarterly review stops something; no meeting waives a customer, counsel, security, privacy, accessibility, insurance, accounting or provider authority.

19. Risk register

Register DRAFT (28 risks)

Columns: **ID** | **Risk** | **Category** | **Cause** | **Impact** | **L** | **S** | **Score** | **Owner** | **Mitigation** | **Trigger / early warning** | **Contingency** | **Status** | **Review date**. Ratings are ASSUMPTION. Cross-references (FR, CR, SR) are in the Cause column.

ID	Risk	Category	Cause	Impact	L	S	Score	Owner	Mitigation	Trigger / early warning	Contingency	Status	Review date
GR-01	Paid pilot stays NO-GO , so no institutional revenue can be accepted for the foreseeable period	Commercial	GO-NO-GO 2026-10-03 lists ten blocking items (independent security assessment, accessibility review, counsel paper, entity/tax/insurance authority, staffed support, restore/rollback drills, named scope, baselines, repeatability)	No pilot revenue; funnel yields only unpaid design-partner work; cash plan assumptions fail	5	4	20	HR (interim)	Work the ten items in order; run an unpaid, non-activation design-partner motion only; track each item's evidence date	Any blocking item without owner or date at the weekly review; no item closed in 30 days	Offer a no-fee design-partner scope only under authorized paper; extend the runway plan (GR-13)	OPEN	2026-10-12
GR-02	Single-founder capacity : selling, delivering, supporting and building are all one person	Delivery	One person holds sales, delivery, security, support and engineering seats (SR-006, CR-002)	Missed calls, slow follow-up, unsafe pilot support, burn out	5	4	20	HR (interim)	Cap active pursuits at three accounts (per ACCOUNT-SCORING); time-box discovery; defer pilot launch until a named support backup exists	Weekly hours committed exceed available hours; response time to prospects over 2 business days	Pause new outreach; narrow to one pilot; seek a contract implementation lead	OPEN	2026-10-12

ID	Risk	Cate gory	Cause	Impact	L	S	Score	Owner	Mitigation	Trigger / early warning	Contingency	Status	Review date
GR-003	Key-person incapacity or exit: no one else can run the company, deploy, or answer a customer	Continuity	No backups assigned for any seat; sole owner of credentials, code and relationships (SR-006, CR-005)	Service stops ; customer data and commitments stranded	3	5	15	HR (interim)	Name a backup for access, incident and offboarding; document runbooks; legal continuity instrument REVIEW: counsel	Founder unavailable for more than [5] business days with open commitments	Pre-agreed customer communication; export-and-offboard runbook	OPEN	2026-10-12
GR-004	Price conflict (individual): D-134 (\$7.99/mo, \$59/yr), D-1154 (\$15/mo, yearly unstate d) and the planning assumption (\$8.99/mo, \$69/yr) all differ; the catalog , pricing page and tests still print the old figures	Commercial	D-1154 not yet implemented; no approved price book (CLM-015)	Inconsistent public pricing, support confusion, possible misrepresentation, wasted work	4	3	12	HR (interim)	Record one decision as D-<pull request number> ; keep billing held; do not publish any price until approved	Any page, email or deck showing a price; a prospect quoting a price back	Withdraw the asset; correct in writing	OPEN	2026-11-05

ID	Risk	Category	Cause	Impact	L	S	Score	Owner	Mitigation	Trigger / early warning	Contingency	Status	Review date
GR-05	Institutional price assumptions unvalidated: \$18/student/yr, \$30,000 minimum, \$35k-\$150k implementation, 15% support (min \$15k) appear in no decision record	Commercial	Planning assumptions only (see ../sales/PILOT_PROP_OSAL_TEMPLATE.mxd appendix)	Quote too high (lose deal) or too low (below delivery cost); minimum binds below about 1,667 students; pilot cohort of 10-200 is far below it	4	3	12	HR (interim)	Test against cost model (../finance/03-COST-MODEL.md); discuss budget ranges with prospects without quoting; deal-desk approval	Two prospects state a budget band outside the assumed range	Revise assumptions; use no-fee design-partner term only	OPEN	2026-11-05
GR-06	Pilot length conflict: code enforces 26 weeks (PILOT_WEEKS, D-134) while the sales motion assumes 8-12 weeks / one term	Commercial / Delivery	Two sources disagree; no decision recorded	Plans fail pilot readiness (duration); proposals contradict code; cohorts and fiscal windows missed	5	3	15	HR (interim)	Decide (26 weeks, 8-12 weeks, or 26-week term with a shorter measured window); record as D-<pull request number> ; change code and tests if shortened	A proposal drafted with a non-26-week term; a prospect needing a one-term pilot	Offer 26-week term with a stated early measurement checkpoint	OPEN	2026-11-12

ID	Risk	Category	Cause	Impact	L	S	Score	Owner	Mitigation	Trigger / early warning	Contingency	Status	Review date
GR-007	No references, logos or case studies: prospects ask for peers and none exist	Commercial	No custom or pilot; CLM-013 prohibits names, logos, case studies	Longer cycle, lost deals to incumbents	5	3	15	HR (interim)	Say so plainly; offer evidence exchange, tight scope, baselines and an exit; design the pilot to <i>earn</i> a reference with claim-specific permission	"Who else uses it?" asked in more than half of discovery calls	Offer extended reference-building terms only through authorized paper	OPEN	2026-10-12
GR-008	Security evidence gaps: no independent assessment, no current DAST, no SOC 2, no HECVAT completion, no penetration test	Security / Commercial	FR-003; GO-NO-GO #2; SR-022	Security review fails or stalls; trust event; deal blocked at security_privacy_accessibility_review	4	5	20	HR (interim); assessed or unassigned	Commission an independent assessment and DAST on the exact candidate; answer questionnaires only from the RFP library with labels	Any prospect requiring SOC 2, pen test or HECVAT as a prerequisite	Record as a disqualifier or accepted prerequisite; defer the account	OPEN	2026-10-12
GR-009	Accessibility review absent: no qualified manual review, no VPAT/ACR	Accessibility / Commercial	CR-004; GO-NO-GO #3; CLM-008	Procurement block; exclusion of users; legal exposure	4	4	16	HR (interim); assessed or unassigned	Commission a qualified manual review and remediate; state limitations honestly; offer accessible alternatives	A prospect's accessibility office asks for a VPAT	Offer a conditional pilot only after review; otherwise defer	OPEN	2026-10-12

ID	Risk	Category	Cause	Impact	L	S	Score	Owner	Mitigation	Trigger / early warning	Contingency	Status	Review date
GR-10	AI cost exposure: planning allowance of 2,400 pooled requests per enrolled student per year is generous; provide cost per request is unmeasured; \$30 per 1,000 overage may not cover cost; heavy use by few users	Financial	Allowance and overage are planning assumptions; provide terms and price changes (.././trust/PROVIDE R-TERMS .md); SR-014	Negative gross margin; surprise bills; forced throttling	3	4	12	HR (interim)	Measure cost per 1,000 requests on real use; hard caps and kill switch; pooled limits in writing only when measured	Monthly AI spend above ASSUMPTION: planned envelope ; one account above 3x average	Throttle or disable AI for the pilot; renegotiate allowance	OPEN	2026-11-05
GR-11	Procurement cycle longer than the fiscal window: approvals take longer than the milestone	Commercial	Typical higher-level approvals unknown; SR-015; D-134 timing	Deal slips a term or year; runway pressure	4	4	16	HR (interim)	Ask path and calendar in discovery (C5); start trust packages early; use the MAP	Procurement path undefined after discovery; no security contact named in 30 days	Offer a smaller non-activation design-partner scope; re-target next term	OPEN	2026-10-12
GR-12	Low student adoption in the pilot cohort	Delivery / Product	Voluntary use; wedge not yet valued (SR-002); no champion enforcement	Metrics miss target; no conversion case	4	4	16	HR (interim)	Strong champion; one first win; communications approved; weekly review; stop/adjust at midpoint	Activation below trajectory after two weeks; first meaningful action under ASSUMPTION threshold	Adjust at midpoint; reduce scope; or stop and report honestly	OPEN	2026-10-12

ID	Risk	Cate gory	Cause	Impact	L	S	Score	Owner	Mitigation	Trigger / early warning	Contingency	Status	Review date
GR-13	Cash runway: unknown or short; plan assumes revenue that is gated	Financial	CR-006, SR-011; runway figures not controlled; GR-01	Cannot fund assessments, counsel, insurance or hiring	3	5	15	HR (interim); CPA unassigned	Fill <code>../../../../finance/13-REAL-NUMBERS-INTAKE.md</code> ; set runway thresholds; sequence spend by gate	Runway under [9] months ASSUMPTION	Lean path: cut scope; defer paid assessments to the highest-value gate; raise capital only after IP determination (SR-012)	OPEN	2026-10-12
GR-14	Contract authority and entity: no confirmed legal entity, signing authority or IP chain	Legal	FR-001; GO-NO-GO #5; SR-016, SR-013	Cannot sign, invoice, insure or raise; university IP claim	4	5	20	HR (interim); counsel unassigned	Retain counsel; confirm entity, IP determination, authority matrix	Any request to sign or pay	Refuse to sign; continue non-binding scoping only	OPEN	2026-10-12

20. Required human and professional reviews

Every document in this report ends with the reviews it needs. They are collected here by document. No review has been done and no reviewer is named: counsel, accountant, tax adviser, broker, security assessor and accessibility assessor are all unassigned.

Existing versus missing: inventory and reconciliation

REVIEW: counsel entity facts, the 72-hour wording, pricing and pilot paper. **REVIEW: security** the HECVAT draft rows.
REVIEW: accounting the finance conflicts.

Business operating system: index

REVIEW: counsel **REVIEW: accounting** **REVIEW: tax** **REVIEW: insurance** **REVIEW: security** **REVIEW: privacy** **REVIEW: accessibility**
REVIEW: procurement per document.

Cloud Security Plan (master plan)

Independent security assessor **REVIEW: security**; counsel **REVIEW: counsel** for notification, DPA and retention durations; privacy lead **REVIEW: privacy**; accessibility evaluator **REVIEW: accessibility**. None named in the repository.

Compliance Evidence Register (consolidated per-control view)

Security assessor **REVIEW: security** for CER-D05..D09, D13, D14; counsel **REVIEW: counsel** for CER-B07, B11, B14, B17, B18, E05, E06, F04, F13; privacy lead **REVIEW: privacy** for CER-B01..B09; accessibility evaluator **REVIEW: accessibility** for CER-F07, F08; insurance broker **REVIEW: insurance** for CER-A12. None is named in the repository.

Data Inventory Template and Starter

Privacy counsel **REVIEW: counsel** for every basis and role cell; privacy lead **REVIEW: privacy** for categories and purposes; tax adviser **REVIEW: tax** for billing record retention; security reviewer **REVIEW: security** for classification. None named in the repository.

Data Retention and Deletion Plan

Counsel **REVIEW: counsel** for every period and the request clock; privacy lead **REVIEW: privacy** for purposes; tax adviser **REVIEW: tax** for the financial class; security reviewer **REVIEW: security** for log and evidence handling. None named in the repository.

Data Security Checklist

REVIEW: security items 3-5; **REVIEW: counsel** items 4 and 6-7; **REVIEW: privacy** item 6; **REVIEW: accessibility** item 7. None named in the repository.

HECVAT Roadmap (Lite first, then Full)

Independent security assessor **REVIEW: security**; counsel **REVIEW: counsel** for DPA, notice and privacy rows; accessibility evaluator **REVIEW: accessibility**; procurement reviewer **REVIEW: procurement** for workbook mapping. None named in the repository.

Incident Response Plan (consolidated working view)

Counsel **REVIEW: counsel** for every notification, contract term, regulator contact and public statement; security reviewer **REVIEW: security** for containment and evidence handling; privacy lead **REVIEW: privacy** for the assessment worksheet. None named in the repository.

Security Questionnaire Library

REVIEW: security SQ-I02, SQ-N03, SQ-A05; **REVIEW: counsel** SQ-D05, SQ-P01, SQ-P03, SQ-P04, SQ-R02; **REVIEW: privacy** section 8; **REVIEW: accessibility** section 10. None named in the repository.

Trust Center Inventory

Counsel **REVIEW: counsel** for NDA form, public policies, the 72-hour wording; accessibility evaluator **REVIEW: accessibility** for any accessibility statement; procurement **REVIEW: procurement** for packet content. None named in the repository.

Vendor Risk Register (consolidated working view)

Counsel **REVIEW: counsel** for entity, DPAs and flow-down; privacy lead **REVIEW: privacy** for roles and regions; security reviewer **REVIEW: security** for attestations; procurement reviewer **REVIEW: procurement** for customer approvals. None named in the repository.

Customer Health Score (pilot operating score and reconciliation)

REVIEW: privacy purpose, fields, retention, survey and any customer-visible display.

Onboarding Workflow (sales handoff to pilot results)

REVIEW: counsel paper and data terms; **REVIEW: privacy** data scope, thresholds, consent; **REVIEW: security** tenant isolation and rollback;

REVIEW: accessibility training and launch materials; **REVIEW: procurement** customer purchasing path.

Pilot Success Plan (template and metric dictionary)

REVIEW: privacy thresholds and survey; **REVIEW: counsel** non-guarantee and claims wording; **REVIEW: accessibility** survey and report formats.

Renewal and Expansion Playbook (process, timeline, NRR)

REVIEW: counsel order forms, renewal and notice terms, reference permissions; **REVIEW: accounting** NRR and ARR definitions, revenue recognition; **REVIEW: tax** indirect tax on renewals; **REVIEW: privacy** case-study data.

Financial model specification: the in-app GTM model

- **REVIEW: accounting** revenue recognition, deferred revenue, collections timing, the gross-margin definition.
- **REVIEW: tax** sales tax on SaaS and services, payroll and entity tax.
- **REVIEW: counsel** any price, pilot paper or customer-facing figure.
- **REVIEW: insurance** coverage and premium assumptions.

Pricing and Packaging (model inputs, not a price book)

REVIEW: tax **REVIEW: accounting** **REVIEW: counsel** **REVIEW: procurement** before any number leaves the company.

Unit economics

- **REVIEW: accounting** definitions of gross margin, CAC allocation of founder time, AI cost classification.
- **REVIEW: tax** none specific; treatment of founder compensation.
- **REVIEW: counsel** any quoted price, overage rate or pilot fee.

Semester 90-Day Go-To-Market Plan

REVIEW: counsel D2-04, D3-01, D2-10. **REVIEW: tax** **REVIEW: accounting** D1-05, D2-05. **REVIEW: insurance** D2-05. **REVIEW: privacy** D1-04, D3-04. **REVIEW: security** D2-02, D2-06. **REVIEW: accessibility** D2-03. **REVIEW: procurement** D2-13, D3-01.

Semester GTM KPI Tree and Operating Cadence

REVIEW: accounting ARR/MRR/CAC/LTV/margin/runway definitions and churn denominators. **REVIEW: privacy** event fields, privacy floor, aggregate reporting and any health signal. **REVIEW: security** security KPIs and evidence-age policy.

Semester Master Go-To-Market Playbook

REVIEW: counsel pilot paper, DPA, claims wording, ambassador disclosure, consent texts, price publication. **REVIEW: tax** **REVIEW: accounting** pricing model, revenue recognition, invoicing, sales-tax treatment. **REVIEW: insurance** coverage before any contracted risk. **REVIEW: privacy** event definitions, thresholds, aggregate reporting, health-score signals. **REVIEW: security** independent assessment, HECVAT answers, trust-room contents. **REVIEW: accessibility** qualified assessment before any conformance language. **REVIEW: procurement** questionnaire process and procurement path.

Semester: Registration Readiness Pilot Overview (Customer-Safe Source Version)

REVIEW: counsel wording and approval record. **REVIEW: privacy** student-experience statements. **REVIEW: security** control statements.

REVIEW: accessibility accessibility statement. **REVIEW: procurement** how the limitations table is presented to buyers.

Semester: board and investor summary (draft)

REVIEW: counsel securities and communications law before any investor use. **REVIEW: accounting** **REVIEW: tax** model basis.

REVIEW: insurance coverage.

Semester GTM, finance, sales and compliance: executive summary

REVIEW: counsel pricing, pilot paper, public wording. **REVIEW: accounting** **REVIEW: tax** model treatment. **REVIEW: insurance** coverage. **REVIEW: security** **REVIEW: privacy** **REVIEW: accessibility** control and conformance statements. **REVIEW: procurement** how limits are presented.

Appendix: master GTM execution prompt

None for the prompt itself. Any output produced from it carries its own review flags.

Building the GTM PDF reports

REVIEW: counsel before the pilot and procurement pack leaves the company.

CRM Pipeline Definition (funnel, stages, forecast and hygiene)

Area	Reviewer	Why
Contact data, retention, suppression record	privacy owner (unassigned) REVIEW: privacy	Minimization and retention are not approved
Forecast recognition language, revenue vs bookings	accountant (unassigned) REVIEW: accounting	Revenue recognition is separate from pipeline
Paper and signature stages	counsel (unassigned) REVIEW: counsel	<code>procurement_legal</code> and <code>contracted</code> are held until counsel-approved paper exists
Any code change to <code>stages.ts</code> or the pipeline tables	Engineering with the owner	The stage vocabulary is test-held; GAPS need a documented change

Discovery Call Script, Qualification Rubric, Demo Script and Pilot Design-Session Agenda

Call-recording or note-taking consent and whether discovery interviews need consent or institutional review: **REVIEW: counsel** (open per `../../../../finance/11-PILOT-EVIDENCE-PLAN.md`). Demo claims about security, privacy and accessibility: **REVIEW: security**, **REVIEW: privacy**, **REVIEW: accessibility**.

Mutual Action Plan Template

Rows 3 and 5: **REVIEW: counsel** **REVIEW: privacy** **REVIEW: procurement**; row 2: **REVIEW: security**; row 4: **REVIEW: accessibility**.

Objection Handling Library (institutional sales)

Area	Reviewer	Scope
Security statements (O-05, O-08, O-09, O-10, O-33)	security owner / independent assessor (unassigned) REVIEW: security	Each status line
Privacy and AI statements (O-06, O-07, O-13, O-14, O-27)	privacy owner (unassigned) REVIEW: privacy	Wording of data-use and training answers
Accessibility statements (O-11, O-12)	accessibility reviewer (unassigned) REVIEW: accessibility	Technical statement vs CLM-007
Contract, DPA, procurement and continuity statements (O-21, O-22, O-34, O-35)	counsel, insurance broker, procurement (unassigned) REVIEW: counsel REVIEW: insurance REVIEW: procurement	Whether any statement could be read as a commitment
Pricing and budget statements (O-03, O-04, O-20)	Founder, Finance, Tax (unassigned) REVIEW: tax	Placeholder discipline

Pilot Proposal Template - Registration Readiness Pilot

REVIEW: counsel whole document and section 14; **REVIEW: tax** and **REVIEW: accounting** pricing and billing; **REVIEW: procurement** on the customer side; **REVIEW: security** **REVIEW: privacy** **REVIEW: accessibility** section 9.

Pilot Sales Email Sequences (account-based institutional outreach)

Area	Reviewer	Why
Footer, sender identification, postal address, opt-out mechanics, email and marketing-communications rules in each recipient's jurisdiction	counsel (unassigned) REVIEW: counsel	Not decided here; the consent draft requires qualified privacy/marketing counsel
Contact-data handling, suppression retention, referral data	privacy owner (unassigned) REVIEW: privacy	Minimization and retention

Area	Reviewer	Why
Sending domain authentication and mailbox security	security owner (unassigned) REVIEW: security	Sender reputation and mailbox compromise risk
Evidence statements in 3.1, 9A, 15.2	security, privacy, accessibility reviewers (unassigned)	Statements must track the evidence register
Any price, order form, DPA or proposal wording	counsel, tax advisor, procurement REVIEW: counsel REVIEW: tax REVIEW: procurement	HOLD templates only

Final Value Report

Student data and thresholds: **REVIEW: privacy**. Permission and conversion language: **REVIEW: counsel**.

Midpoint Executive Review

Student-data handling in the review: **REVIEW: privacy**. Conversion/pricing language: **REVIEW: counsel**.

Pilot Agreement - Business Outline for Counsel

Every section: **REVIEW: counsel**. Plus **REVIEW: tax**, **REVIEW: accounting**, **REVIEW: insurance**, **REVIEW: privacy**, **REVIEW: security**, **REVIEW: accessibility** where flagged.

Quarterly Business Review (QBR) Template - Annual Customer

Contract terms and roadmap language: **REVIEW: counsel**. Trust statements: **REVIEW: security** **REVIEW: privacy**.

GTM and Company-Operations Risk Register (Template, Pre-Populated)

REVIEW: counsel GR-03, 14, 15, 22; **REVIEW: insurance** GR-23; **REVIEW: tax** and **REVIEW: accounting** GR-24; **REVIEW: security** GR-08; **REVIEW: accessibility** GR-09; **REVIEW: privacy** GR-15; **REVIEW: procurement** GR-11.

ROI / Business-Case Calculator - Input Definitions

Cost, tax and revenue treatment: **REVIEW: accounting** **REVIEW: tax**. Customer-facing wording of the scenario disclaimer: **REVIEW: counsel**.

Weekly Pilot Report

Suppression and student-data handling: **REVIEW: privacy**. Customer-facing wording: **REVIEW: counsel**.

Weekly Revenue Review

Forecast and revenue wording: **REVIEW: accounting**. Pricing decisions: **REVIEW: counsel** **REVIEW: tax**.

21. Appendix: master GTM prompt

Appendix: master GTM execution prompt

Control	Value
Status	PLANNING INPUT, REPRODUCED FROM THE FOUNDER'S SUPPLIED MATERIAL. NOT EVIDENCE.
Owner	Harrison Rubin
Evidence date	2026-10-05
Labels used	INTERNAL . This is a prompt, not a statement of fact

The text below was supplied by the founder as a prompt for a planning or coding agent. It is reproduced so the report records what was asked. It is not a statement about the company, and its numbers are planning assumptions. Where it differs from the repository (pilot length, prices), the repository's controls win; see docs/business/INVENTORY.md .

You are the Chief Revenue Officer, Head of Marketing, Customer Success leader, finance lead, security-program coordinator, and Chief of Staff for Semester.

Semester is an education-technology SaaS company serving institutions, departments, students, and individual users. Its launch strategy uses two connected growth engines:

1. Institutional B2B sales:
Sell one narrow, measurable workflow through paid pilots that convert into annual platform contracts.
2. Student adoption:
Drive activation, first meaningful action, workflow completion, retention, satisfaction, and peer advocacy inside each institutional deployment.

Read all existing Semester product, engineering, security, privacy, financial, launch, pricing, sales, customer-success, operations, and audit documentation before generating new work.

Do not create duplicate artifacts. First produce an inventory with:

- Existing document or system
- Location
- Current owner
- Status: current, stale, duplicate, incomplete, missing, or needs review
- Evidence
- Required next action
- Whether professional review is required

Then build an execution-ready GTM operating system.

Core commercial assumptions

Use these as planning assumptions, clearly labeled as assumptions rather than guarantees or public commitments:

- Student Premium: \$8.99/month or \$69/year
- Institutional platform: \$18 per enrolled student/year
- Institutional annual minimum: \$30,000
- Implementation: \$35,000-\$150,000 one-time, based on complexity
- AI overage: \$30 per 1,000 governed requests
- Premium support: 15% of annual platform fee, \$15,000 minimum
- Optional marketplace/partner commission: 12%
- Institutional AI allocation: 2,400 pooled governed requests per enrolled student per year before overage

First pilot requirement

Do not sell Semester initially as a total replacement for every university system. Sell a paid pilot around one urgent institutional workflow.

Default proposed wedge:

"Semester Registration Readiness Pilot"

Pilot design:

- Buyer: Student Success, Advising, Registrar, or a defined academic division
- Scope: one cohort, department, or campus population
- Duration: 8-12 weeks or one academic term
- Outcome: improved readiness, action completion, clarity, and reduced support friction
- Required metric types:
 - activation
 - first meaningful action
 - workflow completion
 - weekly active usage
 - staff time/capacity
 - student confidence or satisfaction
 - support-volume or issue reduction
 - pilot-to-annual conversion readiness
- Commercial structure:
 - paid pilot
 - defined implementation scope
 - annual conversion price
 - named decision owner
 - agreed conversion date

Required deliverables

Create or update all of the following:

Strategy and positioning

- Ideal Customer Profile
- Initial segment and institutional beachhead
- Buyer and stakeholder map
- Category and positioning statement
- Messaging hierarchy
- Persona-specific value propositions
- Competitive battlecards
- Claims substantiation register
- Initial launch wedge and pilot offer

Sales system

- 100-account target-list template
- Account scoring model
- Outreach sequences
- Discovery-call script
- Qualification scorecard
- Demo script
- Demo-environment checklist
- Pilot design-session agenda
- Pilot proposal template
- Mutual Action Plan
- Pricing calculator
- Quote/order-form intake checklist
- Procurement/security response pack
- Objection-handling library
- CRM stages, required fields, exit criteria, and forecast rules
- Weekly revenue review agenda
- Pilot-to-annual conversion playbook
- Expansion and reference-customer playbook

Marketing system

- Marketing website information architecture
- Homepage and use-case-page copy requirements
- Trust Center content plan
- Demo request and lead-routing flow
- SEO topic and keyword map
- 90-day editorial calendar
- LinkedIn content plan for institutional buyers
- YouTube content plan for education/prof
- Instagram/TikTok plan for student adoption
- Webinar plan
- Email nurture sequence
- Retargeting plan
- Case-study and customer-proof system

- Press and partnership outreach plan

Financial system

- 36-month driver-based financial model
- Conservative, base, ambitious, downside, delayed-sales, high-AI-use, pilot-heavy, and annual-contract-heavy scenarios
- Revenue, COGS, operating expense, cash, runway, CAC, LTV, payback, gross margin, retention, expansion, and break-even calculations
- Hiring plan tied to revenue/delivery capacity
- Budget and expense approval policy
- Monthly finance review format

Customer success system

- Sales-to-CS handoff
- Welcome and kickoff sequence
- Implementation plan
- Customer RACI
- Data/integration readiness checklist
- Administrator and user training
- Campus launch kit
- Support process and severity model
- Customer health score
- Weekly pilot report
- Midpoint executive review
- Final value report
- QBR template
- Renewal/expansion playbook
- Churn-risk playbook
- Customer feedback taxonomy
- Case-study consent process

Trust, security, and compliance

- Data inventory
- Data-flow diagrams
- Data classification
- Retention and deletion schedule
- Subprocessor register
- Security overview
- Privacy overview
- Incident response summary
- Business continuity and restore process
- Vendor risk review
- HECVAT Lite roadmap
- Security questionnaire response library
- Accessibility evidence roadmap
- Trust Center content inventory
- Compliance register with owner, evidence, status, renewal date, and risk

Operations

- KPI tree
- Weekly operating calendar
- Decision log
- Risk register
- Executive dashboard
- Revenue, product, customer-success, finance, and security review cadence
- Quarterly OKR process
- Investor/board update template

Rules

- Clearly distinguish assumptions, validated evidence, and future targets.
- Do not publish unverified product, security, accessibility, privacy, compliance, or customer-outcome claims.
- Legal, tax, accounting, insurance, privacy, security, and accessibility materials must be marked "requires professional review" where applicable.
- Do not rely on client-side UI logic as authorization.
- Do not use vanity metrics as proof of customer value.
- Do not recommend broad paid acquisition until the ICP, offer, landing page, conversion path, and sales follow-up process are functioning.
- Do not add duplicate docs when an existing artifact can be updated.

Required final output

Return:

1. Existing versus missing asset inventory
2. P0, P1, and P2 GTM backlog
3. 30/60/90-day execution plan
4. Department owner/RACI matrix
5. Customer acquisition funnel and weekly targets
6. Financial model assumptions and scenario definitions
7. Pilot conversion plan
8. Trust/compliance evidence register
9. Required external systems and integrations
10. Exact next 10 actions in order

Evidence state

Repository evidence. Reproduced from the founder's supplied document. **Operational evidence.** None. **Missing proof.** Not applicable: it is a prompt.

Claim ceiling

None. It is an instruction, not a claim.

Prohibited claims

Do not cite this prompt as evidence of a price, a pilot, a customer or a result.

Professional review required

None for the prompt itself. Any output produced from it carries its own review flags.
