

1EdTech TrustEd Apps vetting matrix: Data Privacy, Security, Accessibility, and Gen-AI rubrics compared in a sortable audit sheet

Computer

Build a district-level edtech compliance tracker comparing Canvas, Blackboard, and Moodle across 1EdTech rubrics and core workflows

Computer

Draft a Go-to-Market GTM launch strategy for higher ed

Map out a pricing and packaging model for universities

Perform a 1EdTech compliance self-assessment checklist

I created a comprehensive working playbook covering the TrustEd Apps audit matrix, university pricing and margins, higher-ed GTM plan, pilot RFP packaging, and a K-12 expansion note.

Included in the playbook

- **Sortable-ready TrustEd Apps matrix** for Data Privacy, Security Practices, Accessibility, and Generative AI.
- Status, priority, owner, evidence, and remediation columns for each compliance control.
- A focused **P0/P1/P2 remediation plan**, including the RLS and SECURITY DEFINER review required before broad institutional data use.
- A higher-ed **GTM strategy**: category narrative, beachhead pilot, buyer map, growth loops, launch phases, and success metrics.
- University **pricing and packaging** across Free, Plus, Pro, Registration Pilot, Student Success, Learning, Career, Campus, and Enterprise offerings.
- Gross-margin model and practical controls for AI, integration, support, storage, notifications, and implementation costs.
- A complete **Semester Registration and Path Pilot RFP** structure, scope, exclusions, implementation expectations, and measurement plan.
- K-12 market-entry guidance focused on graduation, college/career readiness, CTE, dual enrollment, safety, consent, and district governance.

The compliance structure aligns to 1EdTech TrustEd Apps' privacy, security, accessibility, and generative-AI vetting themes. 1EdTech's Data Privacy Certification evaluates public privacy policies and terms against its rubric, while its security, accessibility, and GenAI materials support supplier self-assessment and procurement readiness. ^[1499]^[1501]^[1681]^[1835]

Most urgent actions

1. Turn the matrix into a live tracker with a named owner and evidence link for every P0 item.
2. Complete the production database **RLS and security-definer function** remediation register before claiming broad institutional readiness.
3. Publish the Trust Center: Privacy Policy, Terms, AI Policy, Accessibility Statement, Student Data Promise, subprocessor register, retention/deletion policy, and security overview.
4. Package the Registration and Path Pilot as the first sellable institutional offer.
5. Recruit one design partner and a 25–100 student cohort to generate measured proof—not only product claims.

The Markdown playbook is available in the file panel as “**semester-1edtech-compliance-and-gtm-playbook.**”
