RemNote vs Gemini Notebook: Build an interactive feature matrix for study workflows, AI tutoring, and quiz generation

Computer
Automated study scheduler and quiz generator: Build a weekly syllabus-to-flashcard plan comparing RemNote and Gemini
Computer
Export my saved study schedule to a CSV file
Add a custom module to the feature matrix
Simulate quiz results to test the charts

I created a weekly syllabus-to-flashcard study plan and a separate simulated quiz-results CSV for testing your dashboard charts. The simulated data is clearly labeled and should not be interpreted as actual RemNote-versus-Gemini performance.

Interactive matrix

Use the previously generated **Semester Study Lab** dashboard for the interactive RemNote vs. Gemini Notebook matrix. It already supports:

- Module-filtered study-workflow, tutoring, notes, and quiz comparisons.
- A searchable feature matrix.
- A schedule generator that alternates between RemNote and Gemini Notebook.
- A quiz tracker with weighted-accuracy charts.
- CSV and JSON export.
- Dark mode.
- Locally saved schedules and attempts.

Google documents source-based flashcards, quizzes, and study aids for Gemini Notebook, while RemNote documents Guided Learn workflows that turn PDFs, videos, and documents into study plans, summaries, flashcards, and quizzes. [1] [2] [3]

Weekly study plan

The attached **weekly syllabus-to-flashcard plan CSV** provides a seven-session plan from October 7 through October 13, 2026:

Date	Tool	Focus	Planned outcome
Oct. 7	RemNote	Syllabus intake	Topic outline and 12 source-linked flashcards
Oct. 8	Gemini Notebook	Syllabus intake	Study guide and quiz from the same materials
Oct. 9	RemNote	Module 1	Guided Learn, flashcard review, short quiz
Oct. 10	Gemini Notebook	Module 1	Matched-source flashcards and quiz
Oct. 11	RemNote	Module 2	Reading/highlighting, flashcards, practice quiz
Oct. 12	Gemini Notebook	Module 2	Matched-scope quiz and result recording
Oct. 13	Both	Weekly review	10-question matched topic check where feasible

This is a planning template, not a controlled benchmark. For a fair comparison, use the same source materials, topic coverage, question count, time limit, and scoring rule in both tools. RemNote's reader supports reading, highlighting, and linking document excerpts to notes for attribution. [4]

Simulated results

The attached **simulated quiz-results CSV** contains seven fictional attempts, all marked `SIMULATED — dashboard test data`.

Its purpose is only to test:

- Quiz result tables.
- Weighted-accuracy calculations.
- Per-app comparison charts.
- Module-level filtering.
- Weakest-topic scheduling logic.

It must not be used to claim that either product improves scores more than the other.

Custom matrix module

Add this as a custom module to the dashboard matrix:

Module	Feature	RemNote	Gemini Notebook	Evaluation method
Assessment quality	Source traceability	Reader supports linked source excerpts and notes. [4]	Study tools are described as grounded in uploaded sources. [1]	Check whether each question and explanation can be traced to assigned material.
Assessment quality	Question control	Documented quiz and flashcard generation. [3]	Documented quiz and flashcard generation with customization. [1]	Compare question count, format, difficulty controls, and editability.

Module	Feature	RemNote	Gemini Notebook	Evaluation method
Assessment quality	Feedback usefulness	Guided Learn is designed around manageable study plans and practice. [3]	Quizzes include explanations in Google's announced student workflow. [1]	Score explanation quality against a faculty-approved answer key.
Assessment quality	Reuse and review	Flashcard-centered review workflow. [5]	Flashcards and quizzes generated from the notebook's materials. [1]	Measure how quickly you can revisit missed concepts and whether progress persists.

This module matters because "can generate a quiz" is not enough. For studying, the meaningful criteria are whether the questions match the syllabus, whether feedback shows why an answer is wrong, and whether missed concepts can be reused in later practice.
