

depict semester flow for every role wether you work for semester or use it do tart to finish for every user role and entire Semester System as whole

Semester should operate as a single **Education Operating System** with one shared identity, policy, data, workflow, audit, and intelligence layer—while giving every user a purpose-built experience for their role. A student, faculty member, registrar, parent, buyer, developer, Semester support specialist, and founder all enter the same system differently, see only permitted data, complete different workflows, and contribute to the same governed platform.

The complete lifecycle is:

```
Discover / Invite
→ Identity and account
→ Tenant, role, policy, and consent resolution
→ Role-specific onboarding
→ First meaningful action
→ Daily role workspace
→ Cross-role workflows
→ Support, audit, and governance
→ Lifecycle changes
→ Export, retention, offboarding, or renewal
```

The underlying Semester architecture already defines role-specific workspaces, a native Institution Control Plane, a Company Operating System, and an Operations Command Center—all designed to run as one governed system rather than disconnected tools. ^[1]

Whole Semester system flow

Permission decision

Every page, record, API call, file, AI tool action, export, and workflow command must apply the same decision model:

Can this person perform this action on this resource now?

Identity

+ active account/session
+ tenant membership
+ role

- + capability
- + organizational scope
- + relationship to resource
- + consent
- + data classification
- + policy
- + entitlement
- + workflow state
- = allow / deny / require approval / require step-up authentication

No role receives “everything” merely because their title says administrator. The system should apply least privilege, scoped delegation, approval controls, and audit evidence to all sensitive actions.

External user roles

Role journey map

Role	How they enter	First meaningful action	Daily Semester workspace	Lifecycle endpoint
Self-serve student	Website, referral, app/PWA	Creates a real plan, task, course, or registration action	Student OS	Graduates, exports data, continues as alumni/lifelong learner
Institution-linked student	Campus SSO, invite, official link	Opens/acts on a permitted official academic action	Student OS + institution modules	Graduation, transfer, leave, alumni transition
Applicant	Marketing site, admissions campaign, counselor invite	Creates application/pathway action plan	Applicant Experience	Enrolls, declines, pauses, or exports
Faculty member	Institution SSO/invite	Completes a real course action	Faculty Workspace / Course Studio	End of term, role change, course archive
Teaching assistant	Faculty/institution provision	Assists in assigned course workflow	TA Workspace	Assignment ends, access removed
Advisor	Institution SSO/invite	Completes a check-in, appointment, referral, or success-plan step	Advisor Workspace	Caseload/role changes, offboarding
Student-success leader	Institution SSO	Reviews/acts on permitted aggregate or service workflow	Student Success Console	Role change/offboarding
Registrar	Institution SSO + elevated provisioning	Completes controlled catalog/registration/record workflow	Registrar Workspace	Authorized transfer/offboarding
Academic affairs administrator	Institution SSO	Configures academic policy/program workflow	Academic Operations Console	Policy transfer/role change

Role	How they enter	First meaningful action	Daily Semester workspace	Lifecycle endpoint
Student accounts operator	Institution SSO	Reviews account or completes governed financial workflow	Student Accounts Console	Role change/offboarding
Financial aid liaison	Institution SSO	Handles eligible aid handoff/action	Financial Aid Workspace	Role change/offboarding
Campus-services operator	Institution SSO	Completes service/booking/case action	Campus Services Console	Role change/offboarding
Housing/dining/library operator	Institution SSO	Manages service-specific capacity, case, or access task	Service Workspace	Role change/offboarding
Community moderator	Institution approval/invite	Reviews a report/moderation queue item	Community Safety Console	Review cycle, removal, offboarding
Career/alumni staff	Institution SSO	Posts opportunity or supports career workflow	Career & Alumni Console	Role change/offboarding
Employer	Employer invite or partner account	Posts opportunity / reviews approved candidate interaction	Employer Workspace	Account renewal/deactivation
Alumni	Alumni link/invite	Verifies profile, joins mentoring or career action	Alumni Workspace	Ongoing lifelong identity
Parent/guardian	Student/family invitation	Accepts scoped consent grant	Family Workspace	Grant expires/revoked
Institution executive	Institution SSO	Reviews verified institutional outcome/risk/decision	Executive Console	Role transition
Institution administrator	Institution SSO + admin grant	Completes configuration or launch task	Institution Control Plane	Delegates/ends admin role
IT/security officer	Institution SSO + elevated grant	Reviews identity, integration, access, or assurance action	IT/Security Console	Access review/offboarding
Privacy/compliance officer	Institution SSO + scoped privilege	Handles policy, rights, retention, or evidence workflow	Governance & Trust Console	Role transition
Institutional buyer	Company site/demo/pilot form	Requests demo, books discovery, starts pilot intake	Buyer/Pilot Workspace	Pilot conversion, renewal, closure
Institution implementation lead	Contract + tenant invitation	Completes implementation/launch-gate item	Implementation Workspace	Go-live → customer-success handoff
Partner	Partner invitation/application	Completes onboarding or co-sell action	Partner Workspace	Agreement renewal/termination

Role	How they enter	First meaningful action	Daily Semester workspace	Lifecycle endpoint
Developer	Developer site/account	Makes sandbox API call or configures app	Developer Console	App certification, deprecation, account closure

Student lifecycle

Student OS

- |— Registration Readiness
- |— Course Studio
- |— Study and Practice
- |— Notes, Files, and Projects
- |— Search
- |— AI Copilot
- |— Support
- |— Campus
- |— Community
- |— Career
- |— Student Account
- |— Privacy Center
- |— Family Sharing
- |— Accessibility
- |— Profile
- |— Settings

The student should always see the status of important information:

- Official institutional record
- Derived Semester guidance
- Student-entered information
- AI-generated assistance
- External/integrated information
- Unavailable or stale information

Faculty and teaching-team lifecycle

Grade handoff/ledger → archive → outcomes review → content reuse decision
↓
▼
ROLE CLOSE
Course access sunset according to policy and retention rules

Teaching workflow

Faculty creates assignment
→ course rules verified
→ accessibility checks available
→ students receive clear instructions
→ permitted submissions collected
→ rubric/assessment workflow
→ feedback prepared
→ grades moderated where policy requires
→ grades released through approved workflow
→ audit and learning evidence updated

A TA receives only the capabilities and scope needed for their course relationship—for example, discussion moderation or draft feedback—not universal faculty or registrar authority.

Advisor and student-success lifecycle

ASSIGNMENT
Institution assigns advisor/caseload/permission scope
↓
▼
ONBOARDING
Verify notifications and preferred work queue
↓
▼
DAILY WORK
Caseload → priority signals → appointment/check-in → plan/referral/outreach
↓
▼
COLLABORATION
Student consent + permitted colleagues + office handoff
↓
▼
RESOLUTION
Action completed, referral accepted, support case resolved
↓
▼
OUTCOME
Review aggregate outcomes without overreaching into protected contexts
↓
▼
LIFECYCLE
Caseload reassignment, role change, retention/offboarding controls

Student support workflow

```
Student request or advisor signal
→ scope/classification check
→ responsible office identified
→ owner assigned
→ outreach / appointment / referral
→ student action and confirmation
→ resolution or escalation
→ outcome / satisfaction / audit
```

Registrar and academic operations lifecycle

```
TERM PLANNING
  Terms → catalog → programs → requirements → course sections → rooms/capacity
  |
  ▼
REGISTRATION PREPARATION
  Windows → time tickets → holds → prerequisite/co-requisite rules → policies
  |
  ▼
REGISTRATION
  Student request
  → identity/term/window/hold/requirement/capacity validation
  → enroll / waitlist / deny / override request
  → audit receipt
  → student plan/calendar/action-center update
  |
  ▼
ACADEMIC RECORDS
  Grades → changes → standing → transfer credit → degree audit
  |
  ▼
COMPLETION
  Graduation review → credential conferral → transcript/export
  |
  ▼
REPORTING AND RETENTION
  Compliance export → reconciliation → archival → data lifecycle
```

Registrar controlled action pattern

```
Request
→ capability check
→ policy and effective-date validation
→ authoritative-record check
→ prerequisite/capacity/holds evaluation
→ approval if required
→ idempotent command
→ immutable audit event
→ outbox/domain event
→ read-model refresh
```

→ student/institution receipt
→ rollback/remediation path where permitted

No AI assistant can independently enroll a student, change an official record, issue an official grade, or confer a credential. It may explain, prepare, search approved sources, and draft—but high-impact academic decisions remain authorized human and policy-controlled workflows. ^[1]

Institution operations lifecycle

Institution Control Plane

Institution Control Plane

- ├─ Tenant hierarchy
- ├─ Institution configuration
- ├─ Identity providers, SSO, and SCIM
- ├─ Membership and role provisioning
- ├─ Capability and delegated administration
- ├─ Features, modules, plans, and entitlements
- ├─ Cohorts, rollouts, and kill switches
- ├─ Policy hierarchy and workflow builder
- ├─ Data classification and consent
- ├─ Retention, legal holds, and subject requests
- ├─ AI provider, model, source, and tool policy
- ├─ Integration governance

- └─ Migration, dual run, reconciliation, and cutover
- └─ Audit explorer
- └─ Risk and compliance evidence
- └─ Accessibility program
- └─ Service health and incident notices
- └─ Export and portability
- └─ Offboarding

Semester company employee roles

Semester employees use the **Operations Command Center**. This is not the same as an institution's administrative console. Company users have carefully scoped access to operate the SaaS business, help customers, deliver pilots, manage releases, protect the platform, and run the company.

Semester role	Entry/provisioning	Daily native console	Key controlled actions	Offboarding
Founder / CEO	Employee identity + board-approved authority	Executive Overview, strategy, risk, board	Strategy approval, major commercial/governance decisions	Access revocation, record retention
COO / Operations lead	Employee provisioning	Operations Command Center	Operating cadence, cross-functional work, escalations	Access review and reassignment
Product leader	Employee provisioning	Product Operations	Roadmap, requirements, experiment approvals	Workspace/access revocation
Product manager	Employee provisioning	Product Operations	Define/review product work, feature readiness	Project reassignment
Designer / UX researcher	Employee provisioning	Design/Research Workspace	Design changes, research governance	Asset/access transfer
Software engineer	Employee provisioning	Engineering Workspace	Code changes through review/CI; scoped environment access	Credential/repository revocation
SRE/platform engineer	Elevated scoped provisioning	Reliability/Incident Console	Rollout, rollback, incident remediation	Immediate privileged-access revocation
Security engineer	Elevated scoped provisioning	Security/Trust Console	Investigations, control evidence, vulnerability handling	Key rotation/access revocation
Privacy/compliance lead	Scoped privileged provisioning	Privacy/Governance Console	Data rights, retention, policy and control workflows	Case reassignment and access revoke
AI governance lead	Scoped provisioning	AI Governance Console	Model/provider policy, evaluation, safety review	Policy stewardship transfer
Support specialist	Minimal support role	Support Console	Resolve case; request time-bound support access	Queue reassignment/access revoke
Customer-success manager	Employee provisioning	Customer 360 / Success Console	Success plans, QBRs, renewal coordination	Account reassignment

Semester role	Entry/provisioning	Daily native console	Key controlled actions	Offboarding
Implementation manager	Employee provisioning	Implementation Console	Tenant configuration within scope, launch tasks, migration coordination	Project reassignment
Account executive	Employee provisioning	Revenue Console	Leads, opportunities, proposals, quotes within approval limits	Pipeline reassignment
Marketing/growth lead	Employee provisioning	Growth Console	Campaigns, content, consented lifecycle programs	Campaign ownership transfer
Finance operator	Segregated provisioning	Finance Operations Console	Invoices, credits/refunds within approval limits, reconciliation	Financial access revoke and review
Legal/vendor operator	Scoped provisioning	Legal/Vendor Console	Contract/policy/vendor workflows	Obligation reassignment
People operations	Restricted provisioning	People Console	Hiring, onboarding, access lifecycle coordination	Record retention and access revoke
Partner manager	Employee provisioning	Partner/Marketplace Console	Partner lifecycle, certification, revenue-sharing workflow	Partner ownership transfer
Developer-relations lead	Employee provisioning	Developer Platform Console	Sandbox, developer support, integration certification coordination	Token/access revocation
Board member	Invitation and restricted board access	Board Portal	Review governed board materials; approve resolutions as applicable	Board access closure

Semester employee lifecycle

Recruit

- candidate account
- interview and approval
- employment/contractor agreement
- identity and device provisioning
- role and capability grants
- required security/privacy/accessibility/AI training
- role-specific onboarding
- daily workspace and work queue
- access reviews and performance/workflow participation
- role change or elevation approval
- offboarding request
- revoke sessions/keys/devices/access
- transfer ownership and open work
- retain required employment/corporate records

Semester support lifecycle

```
Customer/student/operator contacts support
→ request classification and data minimization
→ case created
→ owner/queue assigned
→ support specialist reviews authorized context
→ resolves or escalates
→ elevated access requested only if necessary
→ time-bound support access approved and audited
→ response and customer confirmation
→ case resolved
→ trend/quality analysis
```

Support staff must not receive standing access to full student academic records, finance records, or institution administration. They should receive the minimum context necessary for the case, with documented escalation paths for exceptional access.

Platform and developer lifecycle

```
Developer discovers Semester
→ developer account
→ terms and organization verification
→ sandbox tenant
→ OAuth client/service account
→ scoped API credentials
→ API documentation and test data
→ successful test request/webhook
→ integration submission
→ security/privacy/data-scope review
→ certification
→ marketplace listing
→ tenant installation approval
→ versioning/support/incident notification
→ deprecation or retirement
```

Marketplace tenant installation

```
Institution administrator requests app
→ app scope and data classification reviewed
→ policy and consent checks
→ admin approval
→ OAuth authorization/scoped grant
→ installation audit
→ health monitoring
→ periodic access review
→ revoke/uninstall/export when required
```

Cross-role workflow map

STUDENT

- ↻ Faculty: course content, assessment, feedback, office hours
- ↻ Advisor: plan, appointment, referral, outreach
- ↻ Registrar: registration, records, degree audit, graduation
- ↻ Student Accounts: charges, credits, payment plans, statements
- ↻ Campus Services: housing, dining, library, events, spaces
- ↻ Career: opportunities, mentor, portfolio, appointments
- ↻ Family: scoped/time-bounded grant only
- ↻ Community: groups, study sessions, moderated interaction
- ↻ AI: governed assistance with citations and policy boundaries

FACULTY

- ↻ Registrar: section, roster, term, grade handoff
- ↻ Advisor: permitted student support coordination
- ↻ Teaching Team: delegated course capabilities
- ↻ Accessibility Services: accommodations/workflow support
- ↻ AI: course policy, approved sources, assistive drafting

INSTITUTION ADMIN

- ↻ IT/Security: SSO, SCIM, access reviews, incidents, integrations
- ↻ Academic Affairs: policies, requirements, curriculum
- ↻ Registrar: authoritative academic workflows
- ↻ Student Success: service configuration/outcomes
- ↻ Semester Implementation: migration, launch gates, support
- ↻ Semester Customer Success: outcomes, QBR, renewal

SEMESTER TEAM

- ↻ Institution: scoped implementation, support, product feedback, commercial
- ↻ Developers/partners: API governance, certification, marketplace
- ↻ Students: product experience via policy-governed support systems
- ↻ Board/investors: approved reporting, risks, governance

AI flow for every role

User asks Semester AI

- authenticate user
- resolve tenant/role/context
- classify requested data
- check consent and institutional/course policy
- select permitted model/provider
- retrieve only approved sources
- determine allowed tools/actions
- generate response with source/provenance
- label guidance and uncertainty
- require human/official workflow for high-impact action
- record audit/evaluation event

Allowed uses include explanation, planning, summarization, drafting, approved-source search, and low-risk routing with permission. High-impact actions—official grades, academic-record changes, enrollment, financial approvals, disciplinary decisions, or protected-data disclosure—must remain human-authorized and policy-controlled.^[1]

End-of-lifecycle flows

Student graduation or transfer

```
Academic requirements satisfied
→ authorized graduation review
→ credential conferral if approved
→ transcript/credential availability
→ student transitions to alumni/lifelong identity
→ student chooses what profile, portfolio, and career material continues
→ institution applies retention, legal-hold, and export policy
→ revoked scopes removed
→ access status updated with audit evidence
```

Institution offboarding

```
Termination/transition request
→ contract and legal-hold review
→ export/portability plan
→ integration freeze and final reconciliation
→ customer data export
→ deprovision memberships and SSO
→ archive/delete according to contract, retention, and law
→ revoke credentials/webhooks/service accounts
→ final audit and closure evidence
```

Semester employee offboarding

```
HR/legal trigger
→ disable sessions
→ revoke SSO, repository, cloud, database, support, finance, and vendor access
→ rotate shared credentials if necessary
→ transfer account/work/case ownership
→ recover company assets
→ preserve required employment/business records
→ audit completion
```

One operating model

```
PUBLIC COMPANY SITE
  creates awareness and conversion
  |
IDENTITY + TENANT + POLICY
  establishes who can do what
  |
ROLE-AWARE ONBOARDING
  creates first value
  |
ROLE WORKSPACES
```

```
support daily work
|
SHARED WORKFLOWS
  move actions safely across people and departments
  |
CONTROL PLANE
  configures, governs, and measures the institution
  |
SEMESTER COMMAND CENTER
  operates the company and customer deployments
  |
TRUST + EVIDENCE
  protects people, data, reliability, and institutional credibility
  |
LIFECYCLE MANAGEMENT
  handles renewal, change, graduation, offboarding, portability, and retention
```

The important architectural rule is that Semester is **not** “many dashboards.” It is one native operating system where every role receives a tailored workspace over the same authoritative graph, governed by the same policy engine, permission model, workflow engine, audit system, and trust controls.
