Semester path-to-green working pack

Status: proposed working materials; not implementation, deployment, compliance or activation evidence.

Decision rule

A domain is green only for a declared scope when all six maturity facts are accepted, every required capability is covered, applicable foundations are accepted, dependency requirements pass, and no release blocker is open. Unknown is held. Genuine not-applicable decisions require reason and authorized approver. No evidence values have been fabricated.

Domain dossier template

1. Scope and exclusions: capabilities, institution, cohort, data mode, environment.
2. Owner and independent reviewers.
3. Approved requirements and complete journeys.
4. Canonical records, ownership, authority, provenance and retention.
5. Identity, role, relationship, purpose and field-level access matrix.
6. UI routes, navigation, components and all failure states.
7. Implementation references at candidate commit.
8. Test plan and actual retained results.
9. Migration and reconciliation plan with rehearsal results.
10. Hosted deployment and configuration evidence.
11. Institutional/contractual applicability and acceptance.
12. Support, monitoring, incident, restore, rollback and offboarding.
13. Activation approval and observed permitted behavior.
14. Known limitations and invalidation triggers.

Dependencies:
Failure, replay and recovery behavior:
Migration compatibility:
Required tests:
Owner and reviewer:
Evidence to retain:
Activation restriction:

Activation checklist

- Exact candidate, configuration and scope recorded.
- All required capability evidence accepted and current.
- Tenant, relationship, storage, search, export and worker authorization tested.
- Applicable institutional, privacy, legal and procurement approvals accepted.
- Security and accessibility findings resolved or formally accepted where permissible.
- Migration and source reconciliation accepted.
- Hosted workflows verified.
- Restore, rollback, revocation, rights and offboarding drills completed.
- Support and incident coverage active.
- Monitoring and stop criteria approved.
- Activation decision signed; enable only approved scope.

Proposed foundation mapping — verify against original A-G definitions

A Identity, membership and context.
B Canonical records, provenance and source authority.
C Policy, privacy, security and audit.
D Commands, durable events, workers and reconciliation.
E Navigation, design system and accessibility.
F Environments, deployment, observability and recovery.
G Institutional acceptance, company authority and staffed operations.

Priority sequence

1. Reconcile current code and hosted state; do not rebuild completed capabilities.
2. Confirm original A-G definitions and assign named owners.
3. Harden shared foundations.
4. Complete academic student-faculty journeys and institutional controls.
5. Complete planning, registration, advising and connected finance workflows.
6. Complete campus, services, career and partner journeys.
7. Review each domain independently and activate approved scope.
8. Re-evaluate evidence after material changes.
