

Build an all-in-one SaaS launch kit — Delaware C-Corp setup, module pricing matrices, pilot agreement templates, and Tech E&O insurance checklists

Computer

Turn your B2B SaaS launch requirements into a complete go-to-market operating pack — pricing tiers, pilot contracts, and corporate setup steps

Computer

Draft the pilot agreement terms and conditions

Detail module-by-module SaaS pricing models

Map out the go-to-market plan for higher ed

I created a comprehensive **Semester SaaS Launch Kit** covering pilot terms, module pricing, corporate setup, insurance, higher-ed go-to-market, and governance. It is structured so Semester can sell the entire unified platform while enabling modules in controlled, institution-configured waves.

A Delaware C-Corp is commonly considered for venture-backed technology companies because it supports outside equity financing and a conventional stock-option structure; the exact entity decision should be made with startup counsel and a CPA. ^[1715]_[1718]

Pilot agreement essentials

Your first institutional agreement should be a **paid, bounded pilot**, not an unlimited free trial. Use a package consisting of:

Pilot Agreement or MSA
+ Order Form / Pilot SOW
+ Data Processing Addendum
+ Security, Privacy, Accessibility, and AI Exhibit
+ Support / Service-Level Exhibit
+ Implementation Plan and Launch Gates

The pilot should define:

Topic	Recommended position
Duration	One academic term or 90–180 days
Cohort	A named department, program, transfer cohort, course cluster, or defined student population
Scope	Only named modules, users, integrations, environments, and data categories

Topic	Recommended position
Fees	Paid pilot, with any annual conversion credit stated explicitly
Success criteria	Student clarity, activation, verified-resource discovery, work completion, accessibility success, support handoff, and implementation readiness
Institution authority	Institution retains official authority over registration, degree audit, aid, accommodations, discipline, final grades, and other consequential decisions
AI	No general-purpose model training on student/customer production data by default; approved provider/data use only
Support	Named contacts, severity model, escalation process, and clear non-emergency boundary
Conversion	Annual-platform option and decision date; no automatic conversion by default
Exit	Eligible export, credential revocation, retention/deletion process, and closeout plan
Publicity	No logo, testimonial, case study, or outcome claim without written approval

The draft terms in the launch kit also define customer responsibilities, Semester responsibilities, data boundaries, security/incident communications, accessibility process, fees, pilot evaluation, and transition. SaaS agreements should explicitly cover services, payment, SLA/DR, indemnification, liability, term, and transition rights. [^1721]

Module pricing model

The right pricing architecture is:

```
Semester Foundation – required
+ Institution-configured domain modules
+ One-time implementation/migration
+ Support tier
+ Transparent AI/storage/transaction/custom-work guardrails
```

Module	Typical buyer	Recommended pricing metric
Foundation	Institution, program, department	Enrollment band, covered cohort, or campus scope
Academic Navigation	Student success, advising, transfer	Covered students or program scope
Learning & LMS	Academic affairs, online learning	Active course enrollments or institutional band
Assessment & Gradebook	Academic affairs	Active course enrollments or high-stakes scope
Student Life & Community	Student affairs	Institution band or active community population
Student Support Navigator	Student success/basic-needs/transfer offices	Institution band or service-network scope
Career & Pathways	Career services, experiential learning	Covered students or active career users
AI Control Center	CIO, provost, teaching/learning	Institution band plus AI usage tier
Institutional Control Plane	CIO, IT, security	Institution band

Module	Typical buyer	Recommended pricing metric
Interoperability Pack	CIO/IT	Per integration family or enterprise tier
Premium Support	Institution	Fixed annual tier or percentage of subscription
Payments/Transactions	Campus operations	Transaction fee plus operating scope

The initial commercial bands in the launch kit are hypotheses to validate—not public commitments:

Department/program pilot: \$10,000–30,000 annually
 Small institutional deployment: \$30,000–90,000 annually
 Mid-market institution: \$90,000–250,000 annually
 Large enterprise university: \$250,000–750,000+ annually
 Implementation: separately scoped, typically \$5,000–500,000+ by complexity

Subscription, tiered, and usage-informed models are common SaaS structures; for Semester, annual institutional pricing should be paired with explicit implementation and AI/storage guardrails so gross margin does not erode. ^[1716][1719]

Higher-ed GTM plan

Early ideal customers

Prioritize institutions and teams with visible fragmentation and a sponsor who owns the problem:

Transfer-intensive institutions and transfer centers
 Community colleges and regional public universities
 Student-success and advising organizations
 Accessibility-forward institutions
 Student-service organizations with stale/disconnected resource systems
 Gateway-course and academic-support programs
 Career and experiential-learning offices
 Institutions formalizing campus AI governance

180-day execution sequence

Days 1–30: market readiness

Finalize position, audience-specific messaging, website, Trust Center, System Boundaries page, AI transparency, accessibility statement, and pilot offer.

Create synthetic demo tenant, procurement room, contract package, pricing calculator, target-account list, and buyer interview script.

Conduct 15–25 structured discovery interviews and recruit 3–5 design partners.

Days 31–90: paid pilot sales and launch

Close 1–3 paid pilots.
Run readiness workshops.
Configure identity, sources, accessibility, AI policy, and approved integrations.
Train staff and student champions.
Launch with office hours and hypercare.
Measure agreed outcomes from day one.

Days 91–180: repeatability

Convert pilot implementation into templates, default configurations, training, technical runbooks, evidence reports, and expansion packages.

Run midpoint/final value reviews.
Convert qualified pilots to annual contracts.
Publish verified insights and customer stories only with written approval.

Core sales motion

Target account

- personalized problem hypothesis
- discovery
- current workflow and stakeholder map
- tailored demo
- security/accessibility/AI/integration qualification
- paid-pilot design workshop
- proposal and procurement
- implementation readiness
- launch
- value review
- annual conversion and module expansion

Entity and insurance

The launch kit contains a corporate checklist for formation, founder IP assignment, cap-table governance, accounting, tax registration, contracts, and policy records.

Recommended insurance sequence:

Coverage	When
Commercial General Liability	Formation or first customer/contract requirement
Cyber Liability	Before processing production student/customer data
Technology E&O / Professional Liability	Before paid pilots and enterprise agreements
D&O	Before outside financing, investor board, or priced round
EPLI	At meaningful employee hiring or as part of D&O
Workers' compensation	When legally required in employee work states

Coverage	When
Crime/social-engineering	As payment/AP and finance operations mature
Media/IP	As public content, AI, and marketplace exposure grows

For edtech SaaS, Cyber and Technology E&O are particularly important before institutional deployment because institutions commonly expect coverage for privacy/security incidents and service failures. ^[1723][1724]

Governance council

The launch kit includes a full **Product Governance Council Charter**. Its job is to ensure that Semester stays unified while every module remains safe, accessible, supportable, commercially sound, and evidence-backed.

The Council governs:

- New modules and material features
- Data and integration changes
- AI models/providers/policies/evaluations
- Grades, assessments, academic integrity
- Accessibility and remediation
- Community/moderation/basic-needs workflows
- Permissions, retention, export, deletion, and sharing
- High-risk releases, exceptions, and public claims

Every material feature must arrive with a decision packet covering:

- User and institutional outcome
- Data classification/retention/sharing
- Permissions and tenant isolation
- Source, Scope, and Status behavior
- Accessibility test plan
- Security threat model
- AI/provider/evaluation plan, when applicable
- Integration and operational impact
- Support/incident/rollback plan
- Pricing and implementation impact
- Metrics, evidence, and release gates

The complete launch kit is available in the file panel as **Semester SaaS Launch Kit**.
